

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

In March, Hungarian inflation have slowed more than market expectations, with the rate of price increases decreased from a peak of 5.6% to 4.7%. In mid-March, due to high food inflation, the government introduced a margin cap on 30 essential food items, meaning that retailers' profit margins were capped at 10% for these products. The regulation came into effect in the middle of the month, so it did have a minor impact on March inflation. However, according to the central bank's calculations, the measure could reduce April and May inflation by 0.8 percentage points. The cap is planned to remain in place until the end of May, but based on previous policy series, its extension cannot be ruled out. At its March rate-setting meeting, the Monetary Council did not change the key interest rate, which remains at 6.5%. According to the newly released inflation report, inflation risks for this year have increased, and the central bank has revised its forecast for average inflation this year upwards. The average inflation for 2025 is now expected to fall within the range of 4.5% to 5.1%. At the same time, the GDP growth forecast was lowered, suggesting that the Hungarian economy could grow between 1.9% and 2.9% in 2025. During the month Hungarian bond yields experienced elevated volatility amid higher territory. Based on the quite attractive valuation and especially on the international environment with a potential for serious tariff risks and seasonally weakish US data during the spring, we started to add Hungarian duration increasing it to overweight.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	90% MAX Index + 10% RMAX Index
