

## INVESTMENT POLICY OF THE FUND

The aim of the Fund is to invest on the stock market of the Central and Eastern European Region. It is for investors who would like a share in the long-term performance of listed companies in the region. In the development of the portfolio of this Fund, the priority is to optimise the aggregate risk of the securities added to the Fund. In order to reduce risks, the Fund Manager exercises the highest degree of diligence when selecting the securities to be included in the portfolio. It analyses the risk factors of the securities, and supports its decisions with in-depth calculations.

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia, Slovakia), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency composition of the Fund, i.e. the current settlement currency of the benchmark (CEE region currencies). The Fund Manager has the discretionary right to reduce the foreign currency risk of the currency positions differing from the Fund's target currency composition based on the market processes by concluding hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. The Fund records its assets in Hungarian forint (HUF). To ensure liquidity, the Fund wishes to add government securities issued by member states of the EU, OECD, or G20 to its portfolio. No individual investor's decisions can be made in the Fund.

The most important factors influencing the return of the Fund are: changes in the prices of financial instruments in the Fund's portfolio, the risks undertaken by the Fund, gains/losses resulting from the currency exposure in the Fund, and changes in the operational and other expenses of the Fund. The Fund achieves returns through the appreciation of financial instruments in its portfolio. The calculation of the Fund's return is based on Appendix 3 of Act CXXXVIII of 2007 (Hungarian Securities Act).

## MARKET SUMMARY

In the US, the key market indicators remain inflation and unemployment. The Federal Reserve is confident that its relatively high Fed funds rate will bring inflation down over time, but the big headwind is that policymakers continue to run very large budget deficits. The US national debt is \$34,000bn and rising. The annual interest cost of the debt is already \$1,000bn, which is more than the US spends on defense. Against this backdrop, the Fed has a difficult task, because although it would like to lower interest rates in the face of rising interest costs, the inflation figures do not yet support this decision. The question is what the central bank will do if the unemployment rate starts to rise but inflation does not come down. Although Fed Chairman Jerome Powell believes that the most likely scenario is that the unemployment rate will remain low while inflation gradually declines, the macroeconomic numbers do not support this. Where we think the Fed chairman is wrong is that inflation is not coming from the supply side, but from excessive fiscal spending. This in turn is driven by politicians and there is no will to tighten. Here at home, the Hungarian National Bank cut its key rate by 50 basis points to 7.75% in April. The decision was unanimous, and Barnabás Virág, the bank's vice-president, said that the key rate could fall to 6.50-7.00% by the middle of the year, provided the macro data remain strong. The HNB will decide on the basis of incoming data, and inflation developments will remain an important factor in the decision. Following the rate decision, the forint strengthened slightly against the euro and stabilized around the 392 level at the end of the month.

Despite both global bond and equity markets correcting in April, Central European markets managed to rise and the Fund performed well during the month. This time, the Hungarian market outperformed, while Romanian equities lagged. Sectorally, cyclical sectors managed to rise, but the telecom sector also performed well. In contrast, utilities companies performed poorly. As the Fund is the most underweighted in the this sector, it had a positive impact on the Fund's relative performance. Similarly, the Fund performance was helped by its overweight position on the Hungarian market, where OTP, Magyar Telekom and Dunahouse were among the Fund's investments that closed the month well. The recently lagging Polish market also started an upward trend, where we slightly increased equity exposure during the month.
