

VIG Developed Markets Government Bond Investment Fund

INVESTMENT POLICY OF THE FUND

The objective of the Fund is to create a highly defensive investment portfolio for its Investors, which typically invests in developed-market government bonds and related exchange-traded derivatives. According to the intentions of the Fund Manager, the bulk of the Fund's portfolio is made up of bonds issued by foreign states and foreign companies through public offerings. With regard to foreign securities, the Fund only purchases publicly traded securities listed on a foreign stock exchange. It keeps the planned share of non-investment grade securities low. The proportion of bonds that can be held in the Fund at any given time may reach the prevailing legal maximum. In order to ensure liquidity, the Fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds. The Fund Manager has the option, at its own discretion, of hedging all or part of its foreign exchange risks using forward currency positions subject to observing the applicable legal requirements.

MARKET SUMMARY

Early April, Fed Chair Powell admitted a "lack of further progress" on inflation this year, suggesting that rate cuts are likely to come rather later while ECB speakers confirmed that a first rate reduction is likely to occur in June. Raising tensions in the Middle East spooked volatility in energy markets. China's GDP growth slightly increased to 5.3% YoY in the first quarter thanks to a solid quarterly performance which, however, is unlikely to be sustainable. The advance estimate of US Q1 24 GDP showed solid growth of 1.6% annualized, while core PCE inflation rose more than expected to 3.7% annualized. The April Eurozone composite PMI and German Ifo Business Climate Index both showed further improvement, supporting expectations of a modest recovery in economic activity. Government bond markets saw a continuation of the most recent bear trend across the board as US rate-cut expectations were pushed back. The Fed left key rates unchanged, announced it would slow the pace of QT and re-affirmed that rates cuts are likely to be delayed. At the end of a volatile month, 10Y EGBs and USTs yields trade around 5-10bp below last Friday's levels. Equities continued the decline started in early April, while credit spreads stayed range bound with no meaningful differentiation between financials, corporates or high yield. EUR-USD remains above 1.07, while likely intervention by the BoJ drove USD-JPY below 155 from peaks above 160. The upward shift in interest-rate expectations and signs of economic recovery lifted CEE currencies. We didn't make meaningful changes in the fund's composition amid being positioned long core government bonds.
