

VIG Ozon Annual Capital Protected Investment Fund

I series HUF MONTHLY report - 2024 FEBRUARY (made on: 02/29/2024)

INVESTMENT POLICY OF THE FUND

The Fund aims to achieve a higher return than that of short-term bonds by investing in bonds of low volatility and limited-risk profile issued or guaranteed by certain specified states, quasi-sovereign corporations, national banks or supranational institutions. The Fund invests most of its available assets in low-risk instruments, i.e. bonds issued or guaranteed by the Hungarian state or states with a credit rating at least equal to or better than the latter's latest rating (or by their debt management agencies), quasi-sovereign companies, national banks or supranational institutions. The Fund may hold bank deposits, or cash, and enter into repo and reverse repo transactions. The maximum interest rate risk with respect to the Fund as a whole (i.e. its duration) is 3 years, while the weighted average maturity of the individual securities is a maximum of 10 years. For bonds denominated in currencies other than Hungarian forint, the asset manager seeks to fully hedge the foreign exchange risk, and may only deviate from this at the expense of risky assets (i.e. in the case of foreign exchange under/over-hedging). The Fund uses a small portion of its available assets to purchase risky instruments – domestic and foreign equities, equity indexes, higher risk bonds, foreign exchange, commodity market products and collective investment securities on the spot and futures markets. The Fund may enter into both long and short trades. Based on the approach followed when purchasing risky assets, the Fund is an absolute return fund: it selects investment options with the best possible expected return/risk ratio from the options available to it on the domestic and international money and capital markets. There is no possibility for making individual investor decisions in respect of the Fund.

MARKET SUMMARY

In the US, the most important market event remains the Federal Reserve's interest rate meeting and the subsequent press conference. Investors will be trying to guess when the Fed will cut rates for the first time and how many rate cuts there will be in 2024. At the rate-setting meeting, it was decided not to cut interest rates just yet as inflation is falling, but there are signs that inflation could rise again in the future. According to the central bank president, "it would be inappropriate to lower interest rates before there is greater certainty that inflation is on a sustainable path towards the 2% target".

The Hungarian National Bank cut its key interest rate by 100 basis points to 9.00% in January. The decision was not unanimous, but according to the bank's vice-president Barnabas Virág, a large majority supported the higher rate cut. The decision was heavily influenced by the fact that inflation has fallen faster than market and central bank expectations, and that although global political risks remain, but these have not led to an increase in energy prices. Consumer prices rose by 3.8% year-on-year in January, bringing inflation within the central bank's tolerance band. According to the Vice-President's forecast, the key interest rate will be lowered to 6-7% by the end of the first half of the year.

February was an exciting month for the Fund, with active trading throughout the month. At the beginning of the month, we took profits on our futures position on the Polish WIG20 stock index as the index rose by over 8% in a very short period of time, reaching our target price and we closed the position in two tranches. Later in the month, taking into account the good risk/return opportunities and the euphoria/overhang in the equity markets and the negative seasonality in the second half of February, we opened a short position in the German DAX stock index and bought put options on the US S&P 500 stock index, but later on the good macro data pushed the price of risky assets further up and we closed these positions due to tight risk management. The WIG20 broke out of its previous range, so again with strict risk management we opened another long position, but a much smaller one than before, which we closed when the price fell back to our entry level.

As far as interest rate risk is concerned, we remained more cautious, even though the Hungarian National Bank accelerated the cycle of interest rate cuts, which inevitably led to a significant weakening of the HUF, making investors uncertain about how deep the Hungarian central bank will be able to cut rates. As a result, Hungarian short yields have tended to move higher and we have invested a significant portion of our capital in short Eurozone government bonds with full currency risk hedging, which still offer better returns than comparable Hungarian short government bonds.

Overall, we ended the month with a slightly higher return than benchmark.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
