

# VIG Emerging Market ESG Equity Investment Fund

PI series PLN MONTHLY report - 2025 FEBRUARY (made on: 02/28/2025)

## INVESTMENT POLICY OF THE FUND

The aim of the Fund is to share in the performance of companies benefiting from the growth of developing economies, through share price increases or dividend payments of listed companies, either directly (through investments in individual stocks) or indirectly (through ETFs or mutual Funds), while taking environmental, social and governance (ESG) criteria into account. The Fund does not directly invest in shares of Chinese companies within the emerging market universe. The geographical distribution is partly determined by the MSCI Emerging Markets Ex China Index, in which, besides a significant Asian (ex China) focus, European and Latin American companies are also heavily represented, and partly by the MSCI World with Emerging Markets (EM) Exposure Index, in which American and European companies represent the greatest weight. The use of stock and index futures is permitted in order to hedge and effectively build the Fund's portfolio. In selecting the stocks, the Fund pays special attention to the ESG compliance of individual companies; therefore, besides analysing financial factors, portfolio managers also consider environmental, social and governance factors in the investment decision process. The Fund Manager seeks to build a portfolio in which the positive ESG characteristics of companies prevail, i.e. companies with high ESG scores are overrepresented in the portfolio as compared to companies with low ESG scores.

The environmental criterion covers the elements where a business interacts with the environment. This includes, for example, the energy usage, waste management, and emission of pollutants of corporations, as well as the preservation of natural resources. Social criteria include all relations of a corporation with external partners, customers and internal employees. Corporate governance criteria include the legal conditions affecting the reliable operation of a corporation.

Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. The Fund records its assets in Hungarian forint (HUF).

## MARKET SUMMARY

Global financial and capital market movements in February were largely driven by Donald Trump's tariff hike policy. The US President imposed significant import tariffs on Mexico, Canada and China, which initially triggered a sharp sell-off in markets. Eventually, the last-minute announcement of a delay in the tariffs eased the mood, but the phenomenon illustrates the volatility of the markets. Despite the trade tensions, the US economy continued to show solid growth, with annual household consumption growth above 4% and subdued inflation creating a favorable environment for the equity markets. In Europe, investor sentiment was also driven by Trump's tariff announcements and the expected EU response. German and French inflation data came in slightly below expectations, reinforcing expectations of a rate cut by the European Central Bank (ECB) this year. As a result, the yield on two-year German government bonds fell by an unprecedented 19 basis points in February. This was partly due to the German elections, in which the AfD performed weaker than expected. In equity markets, the industrial and automotive sectors were particularly sensitive to US tariffs, while defense and energy stocks performed well. EU policymakers are expected to prepare targeted trade responses, which could lead to further volatility in the coming months.

The Fund started the month of February slightly underweight against the benchmark, but at the beginning of the month it re-opened overweight in the Polish equity market. During the month, the Fund outperformed its benchmark index, mainly due to the overweights in Poland and Greece, while the underweight in Thailand also helped performance. In contrast, the underweight in South Korea took some of the outperformance away. At the end of the month, we remained overweight in Polish, Greek and UAE equities, offset by underweights in Thailand and Malaysia. The Fund started the new month with an overweight of around 5%.
