

# VIG Czech Short Term Bond Investment Fund

I series CZK MONTHLY report - 2025 MARCH (made on: 03/31/2025)

## INVESTMENT POLICY OF THE FUND

The Fund aims to increase the value of its assets under management and to provide investors with a higher yield than Czech bank deposits and short-term bonds over a period of 1 to 2 years. No individual investor's decisions can be made in the Fund. The Fund Manager selects portfolio elements in accordance with the above principles. When making investment decisions, the tools of fundamental analysis and technical analysis are used, and the current market sentiment is also taken into account. The Fund primarily invests in discount treasury bills issued by the Czech State, sovereign bonds, bonds of quasi-sovereign companies, or bonds or deposit-like instruments issued by the Czech National Bank, the European Central Bank or the central bank of another Member State of the European Union. To a limited extent, the portfolio may include government securities, state-guaranteed bonds, corporate bonds (including those issued by financial institutions) and mortgage bonds with at least investment-grade credit rating. Investments may be made in Czech crowns or, to a limited extent, in other currencies. In the case of assets denominated in a currency other than Czech crowns, the Asset Manager shall strive to fully hedge foreign exchange risks (there cannot be a difference of more than 5% between the currency exposure of the derivative transaction and that of the asset to be hedged).

The Fund may enter into deposit and repo transactions, invest – to a limited extent – in units in collective investment undertakings, and derivatives may as well be used (for the purposes of hedging or building an efficient portfolio).

## MARKET SUMMARY

In the Czech Republic, inflation stagnated in March; according to preliminary data, prices rose by 2.7% year-over-year, which was slightly higher than market expectations. Similar to other countries in the region, the main contributors to inflation in the Czech Republic were higher food prices. Although service prices remain elevated, their rate of increase has slowed. At the end of March, during its rate-setting meeting, the Czech National Bank left the benchmark rate unchanged at 3.75%, in line with market expectations. The central bank noted that the country still faces elevated inflationary risks, and the recently announced increase in Germany's defense budget also contributes to this risk. If no significant inflationary surprises emerge by the next rate-setting meeting in May, the continuation of the rate-cutting cycle may once again come into play. During March, Czech short-term bond yields increased. Yields on 1-year maturities rose by 6 basis points, while 3-year bond yields climbed by 7 basis points.
