

INVESTMENT POLICY OF THE FUND

The purpose of the investment fund is to create an equity fund that seeks to benefit from innovation in various industries. The Fund aims to achieve long-term capital growth by investing in global companies that are at the forefront of the use of disruptive technologies and can thus play a leading role in their industries. Disruptive technology refers to innovations or developments that significantly change or disrupt existing industries, business models, products or services. Such trends include, for example, big data (artificial intelligence, cyber security, quantum computers), e-mobility (electric cars and related battery technologies), digitisation and related entertainment (metaverse, e-sports) and, last but not least, fintech and robotics industry breakthroughs.

The Fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. The Fund takes a forward-looking approach and actively seeks companies in industries that show potential for growth through technological innovation. Investments are made in companies that have strong fundamentals and are capable of long-term value creation and achieving competitive advantage through innovation. The investment philosophy is based on the belief that innovation is a key driver of long-term business success and shareholder value. Trends related to technological innovation are long-term processes that extend beyond normal economic cycles and are generally global and affect the entire world. Consequently, the Fund is not subject to any geographical restrictions. Since the Fund aims to profit from long-term growth and has significant exposure to the equity market, we recommend the Fund to investors who want to invest in the longer term and have a relatively high willingness to take risk.

MARKET SUMMARY

The rapid change in US economic policy stances remains difficult to predict. Although there were previously high hopes for the start of the new presidential term, these optimistic expectations have now diminished considerably, as reflected in the deterioration in equity market sentiment and a more cautious investor positioning. Economic growth fears have intensified in March, with the words recession and stagflation becoming more common, which would not be a supportive environment for equity markets. Moreover, the market was kept in a state of great uncertainty by the announcement of Trump's new tariff measures promised for 2 April. After a strong rally over the past two years, technology stocks underperformed in the first three months of 2025. Developments in Chinese artificial intelligence have stirred investor sentiment and put pressure on US tech giants, challenging their leadership in the AI race. Increased international rivalry could dampen growth prospects for some companies, but cheaper AI solutions could boost aggregate demand in the longer term. The largest players remain committed to investing in AI, with economic forecasts predicting that they could spend more than \$300 billion in total on building out this infrastructure by 2025. In our view, however, the biggest risk would be a pull-out from these projects, as negative news on this could even burst the "AI investment cycle", which could mean a significant reshuffling of the AI megatrend winners. The artificial intelligence trend is still one of the most prominent themes in the Fund, but we have also increased the weight of cyber defence companies in the portfolio in recent months.
