

INVESTMENT POLICY OF THE FUND

The fund aims to profit from global megatrends that extend beyond economic cycles. Such trends may include demographic changes (ageing society, developing markets), efficiency gains due to scarce resources (renewable resources, energy efficiency), urbanisation, or even technological innovation. The fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. Megatrends are long-term changes that have a lasting impact on our social and economic environment. The fund aims to share in the profit growth of companies that could be winners in these processes. Megatrends are long-term processes that extend beyond normal economic cycles, are usually global and affect the whole world. Consequently, the fund does not have a geographical specification. As the fund aims to profit from long-term growth and has significant exposure to stock markets, it is recommended for risk-taking investors with a long-term investment horizon. The Fund holds its assets in euro. The Fund invests only in investments where the expense ratio remains below 2.5%, but always aims to keep the average fees charged on the underlying collective investment instruments below 1%. The fund also does not have a geographical specification, and thus no typical currency composition. The target currency of the Fund is therefore the settlement currency of the benchmark index (USD). Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio.

MARKET SUMMARY

The rapid change in US economic policy stances remains difficult to predict. Although there were previously high hopes for the start of the new presidential term, these optimistic expectations have now diminished considerably, as reflected in the deterioration in equity market sentiment and a more cautious investor positioning. Economic growth fears have intensified in March, with the words recession and stagflation becoming more common, which would not be a supportive environment for equity markets. Moreover, the market was kept in a state of great uncertainty by the announcement of Trump's new tariff measures promised for 2 April. After a strong rally over the past two years, technology stocks underperformed in the first three months of 2025. Developments in Chinese artificial intelligence have stirred investor sentiment and put pressure on US tech giants, challenging their leadership in the AI race. Increased international rivalry could dampen growth prospects for some companies, but cheaper AI solutions could boost aggregate demand in the longer term. The largest players remain committed to investing in AI, and are forecast to spend more than \$300 billion in total on building out this infrastructure by 2025. In our view, however, the biggest risk would be a pull-out from these projects, as negative news on this could even burst the "AI investment cycle", which could mean a significant reshuffling of the AI megatrend winners. The AI trend is still one of the most heavily weighted in the Fund, but we have also increased the weight of cyber defence companies in the portfolio in recent months and shifted slightly towards a defensive allocation. In addition, some defence stocks have been added to the Fund in recent months as a new exposure, as a structural increase in defence spending could bring up to hundreds of billions of dollars in new orders per year for companies in the sector.
