

INVESTMENT POLICY OF THE FUND

The objective of the investment fund is to make the Polish bond market accessible to the investors, and to function as a relatively stable, medium-risk investment form bringing steady real yields to our Clients on middle term already, without having to tie down their money for a fixed period of time. The Fund mainly invests in Polish government securities issued in zloty, however, the portfolio manager has some room to complement the portfolio with other bond-type investments. Our goal is to achieve the highest yield while taking the lowest risk. To make investment decisions we use the tools of both fundamental and technical analysis, and we take into consideration the investor sentiment on the markets at all times. The portfolio manager seeks out potential investment opportunities based on the macro-economical expectations, the expected yield curve, the return expected on the curve and the market volatility, and selects investments that are considered to be safe and bring relatively high yields in exchange for the risks taken. The Fund strives for complete exchange risk coverage of foreign currency exposure for the target currency.

MARKET SUMMARY

The performance of the Polish bonds was strong in the March: yields fell by 10 basis points on the 3-year maturity, by 14 on the 5-year maturity and by 3 basis points on the 10-year maturity. The base rate is still at 5.75% and at the rate setting meeting in March it was left unchanged as well. Unlike previous communications, the central bank adopted a slightly more dovish tone. This was reinforced by the fact that, for the third consecutive month, inflation in Poland came in lower than market expectations. In March, as in previous months, the Polish statistical office measured a year-over-year inflation rate below 5%, specifically 4.9%. This raised the possibility that the average inflation for this year may fall well below the central bank's earlier forecasts, which could open the door for interest rate cuts. Discussions are also ongoing regarding the energy price cap set to expire in the third quarter of this year, and it is possible the measure will be extended until the end of the year. The index has now been above the 50 threshold for the second consecutive month, mainly due to a sharp increase in new orders. Meanwhile, industrial production fell by 2% in the second month of the year. Based on the better than expected local inflation outlook and especially on the international environment with a potential for serious tariff risks and seasonally weakish US data during the spring, we hold overweight Polish duration which proved to be a good idea.
