

VIG Alfa Absolute Return Investment Fund

A series HUF MONTHLY report - 2025 JANUARY (made on: 01/31/2025)

INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY

January saw the start of the fourth quarterly corporate reporting season in the US equity markets. The S&P 500 companies are forecast to post earnings growth of more than 11%, while it is questionable whether high profit margins above nominal GDP growth will be maintained. The change in the yield environment was a key factor, with the US 10-year Treasury yield reaching 4.8%, putting pressure on equity markets. The dollar remained extremely strong, which may not be conducive to US economic policy in the long term. Fed policymakers remained cautious: on the January meeting, in line with market expectations they did not cut the base rate. Inflation data showed a mixed picture, with core inflation rising on a monthly basis in December, which could point to strong wage pressures. European markets were volatile on inflation data and interest rate expectations. Inflation in December was higher than expected in several countries - 2.9% in Germany, for example - reducing the European Central Bank's (ECB) room for maneuver in cutting interest rates. In bond markets, the rise in UK yields and the weakening of sterling raised concerns, with some analysts suggesting that the situation is similar to the period before the 1976 IMF bailout in the UK. The housing market remains weak: like the US market, European real estate players are finding it difficult to sell their assets.

In the first month of the year, we pursued highly active asset management. The overvaluation of U.S. technology stocks and excessive investor positioning presented an attractive selling and shorting opportunity. We had to close our short position in two steps but were able to partially reopen it at higher levels on the last day of the month. We largely exited our investments in individual stocks (MOL, Raiffeisen, OTP, PKN, Pekao Bank, Zabka) and instead opened a long position in the WIG20 Polish equity index. Our net equity exposure is currently below 10%. In the coming period, we expect high volatility and bond outperformance.
