

# VIG Alfa Absolute Return Investment Fund

B series PLN MONTHLY report - 2024 OCTOBER (made on: 10/31/2024)

## INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

## MARKET SUMMARY

The US economy was hit by several headwinds in October. Macro data during the month, such as productivity growth and the downward trend in inflation, confirmed the robustness of the US economy. Better-than-expected unemployment and services data led to a strengthening of the dollar, breaking the previous weakening trend. The overall economic picture is beginning to resemble the coveted soft-landing narrative, which should give rise to optimism in markets. The equity market was driven most by the semiconductor and artificial intelligence sectors, with smaller market capitalization companies tending to move sideways. Oil prices rose earlier in the month on fears of escalation in the Middle East and have since moderated. In the bond markets, yields rose to multi-month highs as both presidential candidates are expected to add to already high government debt. Investors are now mostly looking forward to the presidential election on November 5th, and the subsequent Fed rate decision, of which the outcome will strongly determine the economic outlook. Overall, the euro area economy is growing slowly but steadily, driven mainly by a recovery in external demand. The weakening of the euro against the dollar is also helping export-oriented European companies. Economic growth has been higher in the Central-Eastern European region and Southern Europe, while the German and Baltic economies have tended to stagnate. This disparity is due to different sectoral compositions, with Southern Europe helped by the tourism boom and Central and Eastern Europe by the general catching-up. In the Western region in particular, industrial production has declined, partly due to the global slowdown and high energy prices.

In October, Alfa Fund took advantage of the oversold regional equity and Hungarian bond markets in the run-up to the US presidential election to slightly increase its exposure to regional equities and start buying Hungarian government bonds at around 7% for the first time in a long time. However, we are more negative on the weakening of the forint than we are on the Hungarian equity and bond markets and have reopened a weakening position in the forint at around 400. We will keep our weighting in money market assets high in the coming period, but we do not rule out buying very cheap assets that become oversold in the event of high market volatility.

## GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Hurdle rate, annual 6.5%
ISIN code:	HU0000708318
