

INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY

The US equity market had an average performance in December, influenced by rising bond yields and mixed economic data. Although the S&P 500 and the Nasdaq index reached new all-time highs, led mainly by the technology sector, the year-end Santa Claus rally did not deliver the expected results. The ISM services sector index showed a solid growth picture, while labor market data indicated a balanced economy. The Fed's 25 basis point interest rate decision in December was in line with expectations, but Powell's speech suggested less rate cuts next year than expected. This caused a sell-off, that markets have not been able to recover from since. Some sectors, such as semiconductors, did not perform well for other reasons, partly explained by market overpricing and sector-specific uncertainties. In Europe, the German DAX index rose to a new high, supported by a favorable yield environment and expected interest rate cuts by the European Central Bank. But the German market also fell back by the end of December, caused by a political crisis like the one in France. The French market was held back by fiscal uncertainty and tensions around political conflicts, in particular a motion of no confidence in the government. Although weak PMI data indicated a slowdown in the Eurozone economy, investment stimulus statements and expected monetary easing improved sentiment in the cyclical sectors.

The Fund achieved a positive return in December despite a decline in the prices of regional equities and Romanian bonds held in the portfolio during the second half of the month. In the upcoming period, capital markets will be influenced by investors' anticipation of the inauguration of the U.S. president, which introduces significant uncertainty regarding the potential tariffs to be implemented. A new presidential administration is often accompanied by a negative equity market environment due to market uncertainties surrounding the transition. Investors generally dislike uncertainty. Optimism surrounding the largest stocks, their valuations, and market positioning is notably high, increasing the likelihood of a market correction in the first quarter. As a result, we opened a position betting on a decline in the Nasdaq at the end of the year to hedge our exposure to risky assets. We are not optimistic about the Hungarian forint and expect its exchange rate to weaken.
