

VIG Alfa Absolute Return Investment Fund

PI series PLN MONTHLY report - 2024 JULY (made on: 07/31/2024)

INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY

In July, the US stock market experienced significant volatility. Stocks reached historic highs and then fell back, especially in the technology sector. A strong rotation unfolded, with investors buying winners from previous periods and selling laggards such as smaller capitalization stocks. The main reason for the correction in chipmakers was the new US sanctions imposed on exports to China in the middle of the month. On the macro front, inflation statistics came in better than expected, leading investors to believe a September rate cut as a possibility again. The more favorable inflation trajectory was also reflected in longer yields, with the yield on 10-year US Treasuries falling to around 4.21%. Highlights for Hungarian markets included the Hungarian National Bank's July interest rate decision, which resulted in a 25 basis point cut, as expected, leaving the Hungarian base rate at 6.75%. According to the HNB, the main influence on policymakers was the declining US interest rate expectations, but the June inflation figure of 3.7% was also lower than expected. According to the HNB, there could be another 1-2 rate cuts in 2024, meaning that the Hungarian base rate could fall to as low as 6.25%.

The Fund continued to deliver positive returns in July, thanks to falling regional bond yields and a rising Hungarian equity market. We continue to see the bond asset class as the most attractive from a risk/return perspective, but the undervaluation of regional equity markets cannot be ignored. During the month, we increased our gold exposure and again bought Romanian long government bonds, Richter and Raiffeisen shares, while reducing the regional credit portfolio. We took advantage of the strengthening of the forint to open a short position below 390.
