

## INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

## MARKET SUMMARY

August started with a correction in developed economies, including the US. Contributing to the downturn was the likelihood of a hard landing in the economy as opposed to a soft landing. On the other hand, the Japanese central bank's interest rate hike in response to the weakening yen negatively affected investors who had leveraged equity positions financed with cheap Japanese yen. This caused a stock market crash in Japan that spilled over to the United States. US Federal Reserve Chairman Jerome Powell has indicated that the Fed may start cutting interest rates from September, but, he sees no justification for a drastic cut. This uncertainty has increased market volatility and many investors have fled into bonds, and yields have fallen. At the end of the month, Nvidia published its second quarter results, which exceeded investor expectations, but the company's less optimistic forecasts were disappointing. Nvidia, seen as the flagship of the artificial intelligence wave, is also being watched by many as the performance of many technology companies could be affected by its month-end report. In Hungary, the MNB's interest rate policy has reached a turning point, as the one-and-a-half-year cycle of rate cuts appears to be coming to an end, with the central bank leaving the base rate at 6.75% at its August policy meeting. This is consistent with declining inflationary pressures, but we do not rule out further rate cuts in the event of weak economic performance. Another important consideration is the forint exchange rate, which has shown considerable volatility recently, so we believe that an implicit moderation of this may have played a role in the decision.

Despite the turbulence in the capital markets triggered by the Japanese central bank's interest rate hike, the month ended on a positive note for the Fund. In light of the selling wave, we made a slight increase to our position in regional equities by purchasing Raiffeisen. Following data indicating a further slowdown in the US economy, yields on Hungarian bonds also declined. This provided an opportunity to almost completely unwind our Hungarian 10-year government bonds at yields below 6.10%. In light of the anticipated interest rate reductions, we maintain a constructive outlook on long bonds. Consequently, we have been acquiring long Romanian currency bonds in lieu of Hungarian forint bonds. In light of the weakening of the dollar and the relative strength of the forint, we have taken the decision to open a USD/HUF position in the fund, on the basis of our expectation of a weaker forint and a stronger dollar exchange rate in the medium term. US equity indices recovered rapidly to reach levels close to their previous highs following the 10% decline in early August. However, we believe that current equity market pricing is elevated, positioning has become extended once again, and we anticipate a decline in corporate earnings. Consequently, we have initiated a short position in the S&P 500 index.

## GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Hurdle rate, annual 7%
