VIG BondMaxx Total Return Bond Investment Fund

A series HUF MONTHLY report - 2024 NOVEMBER (made on: 11/30/2024)

INVESTMENT POLICY OF THE FUND

The Fund is a total return investment fund that aims to create a portfolio consisting of bond-type assets through active portfolio management that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon. It intends to achieve this objective primarily through asset allocation in global bond markets.
The Fund invests exclusively in bond-type instruments. The Fund's investment universe focuses on developed market government bonds, developed market corporate bonds, local currency emerging market government bonds and hard currency emerging market government and corporate bonds. The primary source of return for the Fund is asset allocation across bond-type asset classes. The asset allocation is based on an “investment clock” approach that uses economic data analysis to determine the position of major regions within a growth cycle. This is complemented by the forecasting of expected movements in real interest rates and inflation expectations, which are also crucial for the allocation across bond markets. Portfolio managers use all these as the basis for making allocation decisions, overweighting the best performing bond asset class in any current economic cycle based on experience and expectations. In the investment process, portfolio managers optimise the interest rate and credit risk of the overall fund and of the exposures to individual bond markets in order to achieve the investment objective.

MARKET SUMMARY

Last month’s forecast update to the upside in the US core inflation probably reminded to the Fed of the policy edge and limited room for policy error as it tries to balance monetary policy in a higher neutral rate and expansionary fiscal policy environment. The rise of 0.27% over month, the strongest since March, raises the question as to the Fed should pause in December or not. Treasuries and the greenback surprisingly didn’t react much to the PCE print. Instead, month-end demand and short covering in Treasuries pushed down yields across the curve and profit taking lashed the dollar back. The 10y TIIPs moved below 2%, a recent month low. According to the recent Fed minutes, many members support a step-by-step rate cuts. Treasuries performed strongly, with 10y yields stopping almost at 4.20% (200DMA) – down c.30bp from the post-election high. NFP, CPI and the Fed meeting pose upside risk for bond yields later in the year. Kiwi and Canadian bonds performed strongly last month. JGBs underperformed but the yen fought back in the last week of November, tracking the lower Nikkei and firmer expectations of a BoJ rate hike next month after the acceleration in Tokyo inflation. BRL sky-rocketed to a new all-time low below 6.0. The fund still keeps its Ukrainian exposure (despite being decreased by another third on very strong YtD performance), and waits for improvement in the Ukrainian-Russia war; a relocation out of the CEE corporate credit (MFB) took place to the U.K. Gilts, further intention to keep or to add to the current exposure to the core rates and/or EM credit markets stays in place.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Hurdle rate, annual 6.5%
