

# VIG Developed Market Short Term Bond Investment Fund

UI series USD MONTHLY report - 2024 NOVEMBER (made on: 11/30/2024)

## INVESTMENT POLICY OF THE FUND

The aim of the Fund is to increase the euro savings held in the Fund, while assuming low interest-rate and credit risk. The Fund mainly buys short-term, euro-denominated bonds of investment-grade issuers, and aims to generate a return for investors through interest income and price gains on them. The Fund Manager invests the savings held in the Fund in short-term bonds denominated in euros. The Fund Manager assumes a low interest-rate risk; the modified duration of the portfolio is more than 6 months, but may not be higher than 2.5 years. The Fund also follows a cautious strategy in terms of assuming credit risk, investing a maximum of just 10% of its assets in bonds of non-investment grade or non-credit rated issuers. The Fund primarily invests in developed-market government securities, but this can also be supplemented by credit-institution, corporate and/or municipal bonds, as well as by term deposits and repo transactions. The Fund can also invest a small part of its portfolio in emerging markets. In addition, the Fund may invest in collective investment forms, and can fine-tune the design of its portfolio through the use of derivatives (stock-exchange and OTC transactions). The Fund invests exclusively in securities denominated in euros, and may hold currency assets in bank deposits or bank accounts only for the purpose of liquidity management and currency hedging. It is not possible to make individual investor decisions in the Fund. No individual investor's decisions can be made in the Fund.

## MARKET SUMMARY

Last month's forecast update to the upside in the US core inflation probably reminded to the Fed of the policy edge and limited room for policy error as it tries to balance monetary policy in a higher neutral rate and expansionary fiscal policy environment. The rise of 0.27% over month, the strongest since March, raises the question as to the Fed should pause in December or not. Treasuries and the greenback surprisingly didn't react much to the PCE print. Instead, month-end demand and short covering in Treasuries pushed down yields across the curve and profit taking lashed the dollar back. The 10y TIIPs moved below 2%, a recent month low. According to the recent Fed minutes, many members support a step-by-step rate cuts. Treasuries performed strongly, with 10y yields stopping almost at 4.20% (200DMA) – down c.30bp from the post-election high. NFP, CPI and the Fed meeting pose upside risk for bond yields later in the year. Kiwi and Canadian bonds performed strongly last month. JGBs underperformed but the yen fought back in the last week of November, tracking the lower Nikkei and firmer expectations of a BoJ rate hike next month after the acceleration in Tokyo inflation. BRL sky-rocketed to a new all-time low below 6.0. We switched from French very short government bonds to longer dated German and French, other positions remained unchanged, amid stayed positive towards asset class overall.
