

VIG Developed Market Short Term Bond Investment Fund

UI series USD MONTHLY report - 2024 MARCH (made on: 03/31/2024)

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to increase the euro savings held in the Fund, while assuming low interest-rate and credit risk. The Fund mainly buys short-term, euro-denominated bonds of investment-grade issuers, and aims to generate a return for investors through interest income and price gains on them. The Fund Manager invests the savings held in the Fund in short-term bonds denominated in euros. The Fund Manager assumes a low interest-rate risk; the modified duration of the portfolio is more than 6 months, but may not be higher than 2.5 years. The Fund also follows a cautious strategy in terms of assuming credit risk, investing a maximum of just 10% of its assets in bonds of non-investment grade or non-credit rated issuers. The Fund primarily invests in developed-market government securities, but this can also be supplemented by credit-institution, corporate and/or municipal bonds, as well as by term deposits and repo transactions. The Fund can also invest a small part of its portfolio in emerging markets. In addition, the Fund may invest in collective investment forms, and can fine-tune the design of its portfolio through the use of derivatives (stock-exchange and OTC transactions). The Fund invests exclusively in securities denominated in euros, and may hold currency assets in bank deposits or bank accounts only for the purpose of liquidity management and currency hedging. It is not possible to make individual investor decisions in the Fund. No individual investor's decisions can be made in the Fund.

MARKET SUMMARY

Last month, the U.S. inflation data came in stronger-than-expected for a second consecutive month, indicating a slowdown in the pace of disinflation. The Bank of Japan made a historical move of ending an era of negative interest rates with a hike and removed yield-curve-control. Meanwhile, Bank of England sounded more convinced to lower rates, while the SNB surprisingly cut. ECB's Lagarde suggested that June remains the most likely timing for the first rate cut. Jerome Powell restated that the Fed has a room to assess the data before deciding to cut rates later this year. The ISM manufacturing index surprisingly moved back above the 50 threshold in March, while services one declined somewhat. OPEC members confirmed their output cuts for the second quarter of the year. EGB and UST yields increased, curves steepened, on strong US data. BTPs recovered their initial weakness, with the 10Y spread to Bund moving back to 140bp. Equity indices returned weak. In the European corporate credit market, senior investment grade spreads tightened slightly, while high yield spreads widened a tad. In FX, EUR-USD rallied back above 1.08, while the JPY and the CNY are still lagging. Brent prices jumped above \$90/bbl as geopolitical tensions in the Middle East escalated. We didn't make meaningful changes in the fund's composition and stayed positive towards asset class overall.

GENERAL INFORMATION
