

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

In the US, inflation and unemployment remain the most important market indicators. At its May meeting, the US Federal Reserve left its key interest rate unchanged and Fed Chairman Jerome Powell said at the press conference that there was a high probability that there will be no more rate hikes in the future. Monthly unemployment data was weaker than expected, supporting the Fed chairman's decision, but year-on-year inflation did not fall. The question that has been asked repeatedly is what the Fed will do if inflation stabilizes at a higher than expected level but unemployment starts to rise, threatening a possible recession. The US national debt is increasing from month to month, so it would be in the interest of fiscal policy makers to keep the Fed funds rates low, thereby reducing the amount of interest paid on the debt, but if inflation does not fall and new rate cut cycle is initiated, the US economy could easily enter a stagflationary environment.

In Hungary, the Hungarian National Bank cut its key interest rate by a further 50 basis points to 7.25% in May. The decision was unanimous, with the bank's deputy governor, Barnabás Virág, saying that the key rate could fall to 6.75%-7.00% by mid-year if macroeconomic data remain favorable. However, inflation has started to rise again, albeit slightly, which will limit the National Bank's room for maneuver. The forint strengthened to a three-month high against the euro during the month, but started to weaken after the rate cut, approaching the 390 level by the end of the month.

In May, the fund was 100% against the benchmark. Gold hit a new all-time high in May, so if there is any selling develops, we want to take advantage of it by buying it. We believe that although gold has moved a little ahead of itself, silver continues to perform very well against gold and until this changes, we expect positive performance from the precious metals.
