

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

January saw the start of the fourth quarterly corporate reporting season in the US equity markets. The S&P 500 companies are forecast to post earnings growth of more than 11%, while it is questionable whether high profit margins above nominal GDP growth will be maintained. The change in the yield environment was a key factor, with the US 10-year Treasury yield reaching 4.8%, putting pressure on equity markets. The dollar remained extremely strong, which may not be conducive to US economic policy in the long term. Fed policymakers remained cautious: on the January meeting, in line with market expectations they did not cut the base rate. Inflation data showed a mixed picture, with core inflation rising on a monthly basis in December, which could point to strong wage pressures. European markets were volatile on inflation data and interest rate expectations. Inflation in December was higher than expected in several countries - 2.9% in Germany, for example - reducing the European Central Bank's (ECB) room for maneuver in cutting interest rates. In bond markets, the rise in UK yields and the weakening of sterling raised concerns, with some analysts suggesting that the situation is similar to the period before the 1976 IMF bailout in the UK. The housing market remains weak: like the US market, European real estate players are finding it difficult to sell their assets.

The Sub-Fund continued to rise in January. At the beginning of the month, we increased its exposure to 99% against the benchmark. We believe that the uncertain economic and political environment created by President Trump could continue to have a positive impact on gold prices. The open criticism of the Federal Reserve Chair and persistently high U.S. inflation could also be very supportive in this regard in the near future. While positioning may slow gold's ascent, the fact that gold has been trading sideways for the past three months suggests that this risk can currently be overlooked. In our view, this sets up a positive outlook for gold in 2025, and we still believe that in the event of a major market sell-off, increasing gold exposure in the Sub-Fund could be a worthwhile move.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Fund has no benchmark
ISIN code:	HU0000733837
Start:	05/07/2024
Currency:	HUF
Net Asset Value of the whole Fund:	8,334,991,988 HUF
Net Asset Value of A series:	508,868,111 HUF
Net Asset Value per unit:	1.288251 HUF
