

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

In April, Hungarian inflation may have slowed more significantly according to market expectations, with the annual rate of price increase potentially dropping from 4.7% in the previous month to 4%. The effect of the margin regulation introduced in March was already fully visible in April, making it the primary factor contributing to the slowdown in inflation. Additionally, the recent decrease in fuel prices also supported lower inflation. At the beginning of May, the government announced that since they were not entirely satisfied with the effects of the margin regulation, they would extend it to household and drugstore product categories as well. For these additional 30 products, a 15% margin cap will be applied, and a 10% price decrease is expected as a result of this measure. The government has not yet decided on the extension of the food margin cap, but most analysts believe that the measure could remain in place at least until next year's elections. At its April rate-setting meeting, the Monetary Council did not change the base rate, which remains at 6.5%. Communication remained hawkish, and according to the Council, it is not yet time to further reduce interest rates. The Hungarian economy performed very weakly in the first quarter, with year-on-year GDP growth at 0%, and economic performance even declined compared to the previous quarter. In parallel, analysts' growth forecasts for this year have been steadily decreasing. Throughout the month, short-term yields mostly remained unchanged, with the 3-, 6-, and 12-month reference yields staying within the 6.20– 6.25% range. Longer government bonds performed well, but yield curve has steepened significantly. Long end government bond yields decreased by circa 30bps, while yields of 3-5 year long Hungarian government bonds decreased by more than 50bps. We held more than 1 year duration overweight in Polish duration, which proved to be a good decision. However, to achieve this, we had to overweight long end bonds to the detriment of short and mid part of the yield curve, which detracted from positive relative performance as steepness of the yield curve increased significantly, meaning that short term bond yields decreased much more than longer yields.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	90% MAX Index + 10% RMAX Index
