

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, averagely low-risk form of investment, while providing investors with higher returns over the medium term than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) on behalf of the Hungarian State, and bonds issued by the National Bank of Hungary (MNB). The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated in HUF. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

MARKET SUMMARY

In February, the pace of price increases continued to slow in Hungary, in spite of the 3.9% market expectations, year-on year inflation slowed to 3.7%. Although the excise tax increase in January only partially appeared in prices, February brought a noticeable increase in fuel prices, as we observed a 6.7% increase at gas stations within one month. At the second rate-setting meeting of the year, the Monetary Council continued its rate cut cycle. Market consensus was highly divided, as analysts were expecting a cut of either 75 or 100 basis points in almost equal proportions. However, the Monetary Council decided, that due to the faster-than-expected decline in inflation, they could temporarily accelerate the pace of rate cuts, thus reducing the base rate by 100 basis points to 9%. Following the decision, Barnabás Virág emphasized at the press conference that despite the decision, they still consider a base rate of 6-7% by mid-year to be realistic. The forint did not react well to the acceleration of the rate cut pace, rising above 390 against the euro after the meeting. Fundamentals are still supportive. The regional valuation has somewhat improved; both forward and backward-looking real interest rates are higher than the regional average. During the month, apart from short-term yields, there was an increase in yields on the yield curve. At the 3 year maturity yields closed the month 26 basis points higher, at the 5 year maturity 42 basis points higher, and at the 10 year maturity 47 basis points higher by the end of the month.
