

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

August started with a correction in developed economies, including the US. Contributing to the downturn was the likelihood of a hard landing in the economy as opposed to a soft landing. On the other hand, the Japanese central bank's interest rate hike in response to the weakening yen negatively affected investors who had leveraged equity positions financed with cheap Japanese yen. This caused a stock market crash in Japan that spilled over to the United States. US Federal Reserve Chairman Jerome Powell has indicated that the Fed may start cutting interest rates from September, but, he sees no justification for a drastic cut. This uncertainty has increased market volatility and many investors have fled into bonds, and yields have fallen. At the end of the month, Nvidia published its second quarter results, which exceeded investor expectations, but the company's less optimistic forecasts were disappointing. Nvidia, seen as the flagship of the artificial intelligence wave, is also being watched by many as the performance of many technology companies could be affected by its month-end report. In Hungary, the MNB's interest rate policy has reached a turning point, as the one-and-a-half-year cycle of rate cuts appears to be coming to an end, with the central bank leaving the base rate at 6.75% at its August policy meeting. This is consistent with declining inflationary pressures, but we do not rule out further rate cuts in the event of weak economic performance. Another important consideration is the forint exchange rate, which has shown considerable volatility recently, so we believe that an implicit moderation of this may have played a role in the decision.

The leading Hungarian stock index - the BUX - closed the last month of the summer with a slight decline, which also led to a decline in the Fund's share price. The Fund slightly underperformed its benchmark. Among the blue chips, MOL shares were weak, but Magyar Telekom was also lagging on the Budapest Stock Exchange, where we saw profit realization. Richter continued to rise after breaking important technical levels. During the month, we entered Magyar Telekom as a buyer, while we slightly reduced our weight in Waberer's. On average, the Fund had an equity exposure 2% higher than the benchmark index in August.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% BUX Index
ISIN code:	HU0000727474
Start:	11/09/2021
Currency:	HUF
Net Asset Value of the whole Fund:	3,238,655,464 HUF
Net Asset Value of B series:	151,726,835 HUF
Net Asset Value per unit:	1.188002 HUF
