

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

In the US, the key market indicators remain inflation and unemployment. The Federal Reserve is confident that its relatively high Fed funds rate will bring inflation down over time, but the big headwind is that policymakers continue to run very large budget deficits. The US national debt is \$34,000bn and rising. The annual interest cost of the debt is already \$1,000bn, which is more than the US spends on defense. Against this backdrop, the Fed has a difficult task, because although it would like to lower interest rates in the face of rising interest costs, the inflation figures do not yet support this decision. The question is what the central bank will do if the unemployment rate starts to rise but inflation does not come down. Although Fed Chairman Jerome Powell believes that the most likely scenario is that the unemployment rate will remain low while inflation gradually declines, the macroeconomic numbers do not support this. Where we think the Fed chairman is wrong is that inflation is not coming from the supply side, but from excessive fiscal spending. This in turn is driven by politicians and there is no will to tighten. Here at home, the Hungarian National Bank cut its key rate by 50 basis points to 7.75% in April. The decision was unanimous, and Barnabás Virág, the bank's vice-president, said that the key rate could fall to 6.50-7.00% by the middle of the year, provided the macro data remain strong. The HNB will decide on the basis of incoming data, and inflation developments will remain an important factor in the decision. Following the rate decision, the forint strengthened slightly against the euro and stabilized around the 392 level at the end of the month.

The Fund slightly underperformed its benchmark in April. Hungary's leading stock market index, the BUX, continued its upward trend and closed April with a gain of over 4%. Blue chips all ended the month with positive performance. Following the government's announcement, fuel prices fell slightly from their previous levels, but this did not trigger a significant negative reaction in the share price. The OTP share price broke out of this year's trading range into positive territory on news of a potential bank takeover announced during the month, but there was also significant movement in the small cap market. During the month we increased our weightings in Richter and OTP and took a selective approach to small caps.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% BUX Index
ISIN code:	HU0000727482
Start:	11/09/2021
Currency:	HUF
Net Asset Value of the whole Fund:	2,361,665,465 HUF
Net Asset Value of R series:	2,337,450,554 HUF
Net Asset Value per unit:	1.148307 HUF
