

VIG Opportunity Developed Markets Equity Investment Fund

I series HUF MONTHLY report - 2024 FEBRUARY (made on: 02/29/2024)

INVESTMENT POLICY OF THE FUND

The Fund aims to profit from the returns on global equity market investments through stock prices and dividend income. According to the intentions of the Fund Manager, the bulk of the Fund's portfolio is made up of shares of foreign companies issued through public offerings, but the Fund may also invest in shares issued by Hungarian companies. The proportion of shares that can be held in the Fund at any given time may reach the prevailing legal maximum. The Fund Manager has the option, at its own discretion, of hedging all or part of its foreign exchange risks using forward currency positions subject to observing the applicable legal requirements.

MARKET SUMMARY

In the US, the most important market event remains the Federal Reserve's interest rate meeting and the subsequent press conference. Investors will be trying to guess when the Fed will cut rates for the first time and how many rate cuts there will be in 2024. 2023 has ended with the idea that this year the economy will either land hard, meaning a recession, or soft, meaning the economy will slow but there will be no recession. At the rate-setting meeting, it was decided not to cut interest rates just yet as inflation is falling, but there are signs that inflation could rise again in the future. According to the central bank president, "it would be inappropriate to lower interest rates before there is greater certainty that inflation is on a sustainable path towards the 2% target".

The Hungarian National Bank cut its key interest rate by 100 basis points to 9.00% in January. The decision was not unanimous, but according to the bank's vice-president Barnabas Virág, a large majority supported the higher rate cut. The decision was heavily influenced by the fact that inflation has fallen faster than market and central bank expectations, and that although global political risks remain, but these have not led to an increase in energy prices. The Hungarian economy is experiencing strong and widespread disinflation. Consumer prices rose by 3.8% year-on-year in January, bringing inflation within the central bank's tolerance band. According to the Vice-President's forecast, the key interest rate will be lowered to 6-7% by the end of the first half of the year. Following the rate decision, the forint weakened against the euro, rising above the 390 level.

The Fund generated a positive return but underperformed its benchmark. The main reason for the underperformance was the short position in Nvidia, which was closed at the beginning of the month. Nvidia shares rallied sharply after the first 2024 quarterly report and we shorted them again after the rally. We believe that although artificial intelligence will be very important in the future, the company's share price performance has far exceeded the most optimistic expectations. We also bought gold and silver mining stocks in several tranches during the month, as we believe that precious metals should perform well in the current economic environment.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% MSCI World Net Total Return USD Index
