

VIG Central European Equity Investment Fund

UI series USD MONTHLY report - 2025 MAY (made on: 05/31/2025)

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to invest on the stock market of the Central and Eastern European Region. It is for investors who would like a share in the long-term performance of listed companies in the region. In the development of the portfolio of this Fund, the priority is to optimise the aggregate risk of the securities added to the Fund. In order to reduce risks, the Fund Manager exercises the highest degree of diligence when selecting the securities to be included in the portfolio. It analyses the risk factors of the securities, and supports its decisions with in-depth calculations.

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia, Slovakia), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency. The Fund Manager has the discretionary right to reduce the foreign currency risk of the currency positions differing from the Fund's target currency, based on the market processes by concluding hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. To ensure liquidity, the Fund wishes to add government securities issued by member states of the EU, OECD, or G20 to its portfolio.

MARKET SUMMARY

The US stock market rose in May, supported by strong reports from large technology companies and a technical rebound from low positioning. The S&P 500 index's multi-day rally and persistent buying by retail investors signaled positive sentiment, but this was not matched by institutional interest, with large investment funds tending to wait and see. The market was negatively affected by the intensification of the trade war rhetoric, Donald Trump's tariff threats and the Fed's monetary wait-and-see approach. Although service sector and labor market data remained strong, some macroeconomic indicators and the slowdown in retail consumption are cause for concern. Most GDP estimates point to a decline, and the Fed has also adopted a wait-and-see stance. In the words of the chairman of the Federal Reserve, 'waiting costs nothing'.

In Europe, stock markets, especially the German market, have outperformed, supported by algorithmic buying, a strong euro and a weak dollar. However, economic data does not paint a uniform picture: inflationary pressures in France and Germany are easing, which could give the European Central Bank room to cut interest rates, but important macroeconomic indicators have declined in several countries (e.g. France, Italy). Domestic political uncertainties in Germany, which culminated in difficulties surrounding Merz's election, caused temporary turmoil, but the markets did not react with a panic. According to interest rate market expectations, the European Central Bank will begin cutting interest rates later this year.

Central European equities performed exceptionally well in May. This time, the rally was led primarily by the previously underperforming Romanian market, while Austrian and Czech equities also posted near double-digit gains. Two key political events played a pivotal role in moving markets during the month. The result of the Romanian presidential election triggered a notable market rebound, whereas the outcome of the very close Polish presidential race disappointed investors. Once again, the banking sector was the main driver of the regional market's gains, with Erste Bank and BRD leading the way. In contrast, the pharmaceutical and oil sectors were notably weak, mirroring the underperformance of these sectors globally. The Fund outperformed its benchmark index during the month. While we remain optimistic about the region's outlook, we have temporarily reduced the Fund's equity exposure following the strong gains seen in April.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% CETOP 5/10/40 Index
