

VIG Czech Short Term Bond Investment Fund

A series CZK MONTHLY report - 2025 MAY (made on: 05/31/2025)

INVESTMENT POLICY OF THE FUND

The Fund aims to increase the value of its assets under management and to provide investors with a higher yield than Czech bank deposits and short-term bonds over a period of 1 to 2 years. No individual investor's decisions can be made in the Fund. The Fund Manager selects portfolio elements in accordance with the above principles. When making investment decisions, the tools of fundamental analysis and technical analysis are used, and the current market sentiment is also taken into account. The Fund primarily invests in discount treasury bills issued by the Czech State, sovereign bonds, bonds of quasi-sovereign companies, or bonds or deposit-like instruments issued by the Czech National Bank, the European Central Bank or the central bank of another Member State of the European Union. To a limited extent, the portfolio may include government securities, state-guaranteed bonds, corporate bonds (including those issued by financial institutions) and mortgage bonds with at least investment-grade credit rating. Investments may be made in Czech crowns or, to a limited extent, in other currencies. In the case of assets denominated in a currency other than Czech crowns, the Asset Manager shall strive to fully hedge foreign exchange risks (there cannot be a difference of more than 5% between the currency exposure of the derivative transaction and that of the asset to be hedged).

The Fund may enter into deposit and repo transactions, invest – to a limited extent – in units in collective investment undertakings, and derivatives may as well be used (for the purposes of hedging or building an efficient portfolio).

MARKET SUMMARY

In the Czech Republic, at the May 7 interest rate-setting meeting, the key rate was cut by 25 basis points as expected, bringing it to 3.5%. The central bank maintained a hawkish tone, and according to the new forecast, inflation for this year is projected to be 2.5% (previously: 2.4%). The upward revision in the inflation forecast is mainly attributed to sticky service prices and high food prices, which were already evident in the May inflation data. Inflation for the month came in above market expectations, with the Czech Statistical Office reporting a 2.4% year-on-year price increase, compared to the consensus forecast of 2%. The primary driver of the price increase was rising food prices, but service prices also rose significantly during the month—something the Monetary Council is closely monitoring. Economic activity was strong in the first quarter, with GDP growing by 2.2% compared to the same period last year. Due to strong wage growth, retail sales increased significantly, reaching levels last seen before the outbreak of the COVID-19 pandemic. During May, yields on Czech short-term bonds rose. The 1-year maturity saw a 2 basis point increase, while 3-year bond yields rose by 15 basis points.
