

INVESTMENT POLICY OF THE FUND

The Fund aims to share in the returns of the Polish stock market, and to profit from Polish economic growth through stock prices and dividend income. In accordance with the risk characteristics of equity investments, the Fund qualifies as a high-risk investment. According to the Fund Manager's intentions, the bulk of the Fund's portfolio is made up of the shares of foreign companies issued through public offerings. The primary investment targets are the securities, traded on the stock exchange or about to be listed on the stock exchange, of companies that operate in Poland or that derive a significant portion of their revenues from Poland, or whose shares are listed on the Warsaw Stock Exchange. The Fund may also invest in equities of other Central and Eastern European companies (Austria, Czech Republic, Hungary, Russia, Romania and Turkey). When developing the portfolio, the shares determine the nature of the Fund, and thus the proportion of shares that can be held in the Fund at any given time may reach the prevailing legal maximum. The Fund holds more than 30% of its assets in currencies other than the local currency (HUF).

MARKET SUMMARY

The US stock market rose in May, supported by strong reports from large technology companies and a technical rebound from low positioning. The S&P 500 index's multi-day rally and persistent buying by retail investors signaled positive sentiment, but this was not matched by institutional interest, with large investment funds tending to wait and see. The market was negatively affected by the intensification of the trade war rhetoric, Donald Trump's tariff threats and the Fed's monetary wait-and-see approach. Although service sector and labor market data remained strong, some macroeconomic indicators and the slowdown in retail consumption are cause for concern. Most GDP estimates point to a decline, and the Fed has also adopted a wait-and-see stance. In the words of the chairman of the Federal Reserve, 'waiting costs nothing'.

In Europe, stock markets, especially the German market, have outperformed, supported by algorithmic buying, a strong euro and a weak dollar. However, economic data does not paint a uniform picture: inflationary pressures in France and Germany are easing, which could give the European Central Bank room to cut interest rates, but important macroeconomic indicators have declined in several countries (e.g. France, Italy). Domestic political uncertainties in Germany, which culminated in difficulties surrounding Merz's election, caused temporary turmoil, but the markets did not react with a panic. According to interest rate market expectations, the European Central Bank will begin cutting interest rates later this year.

Despite a mixed international market sentiment, Central European equity markets strengthened in May. Throughout the month, investor sentiment was influenced by U.S. economic data and global trade outlooks. In Europe, cautious optimism prevailed, while Asian markets exhibited more subdued movements. After stronger performances in Hungary and Poland in the previous month, May saw outperformance from Romania and the Czech Republic, which had lagged behind earlier. The Polish WIG20 index posted a slight gain despite uncertainties surrounding the Polish elections. Among the best-performing stocks were companies such as Polimex, Shoper, and Enea, all of which showed significant growth in May. In contrast, Eurocash, PCF Group, and Cyfrowy Polsat experienced a decline in their share prices.
