

INVESTMENT POLICY OF THE FUND

The purpose of the investment fund is to create an equity fund that can profit from long-term demographic changes and the related changes in consumer habits. The Fund aims to achieve long-term capital growth by investing in global companies that can benefit from the growth and aging of the population, the social and economic changes associated with a healthy lifestyle, urbanisation, the expansion of the emerging markets' middle class and the global economic trends stemming from these social changes, as well as the changing consumption habits driven by such demographic changes.

The Fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. The Fund takes a forward-looking approach and actively seeks companies in industries that can benefit from the long-term global demographic changes and related changes in consumer habits. Investments are made in companies that have strong fundamentals and are well positioned for long-term value creation and competitive advantage due to demographic and social changes. Trends related to demographic and social changes are long-term processes that go beyond normal economic cycles and are generally global and affect the entire world. Consequently, the Fund is not subject to any geographical restrictions. Since the Fund aims to profit from long-term growth and has significant exposure to the equity market, we recommend the Fund to investors who want to invest in the longer term and have a relatively high willingness to take risk.

MARKET SUMMARY

The rise in artificial intelligence stocks and the weakening of the dollar continued in June. However, defensive sectors still failed to show relative strength. The performance of the US stock market was supported by a number of factors last month. These include favorable corporate earnings (Oracle), heightened expectations of interest rate cuts, and the earnings growth advantage for large-cap companies resulting from the weakening of the dollar. In addition, lower realized volatility encouraged algorithmic strategies to expand their positions, while falling energy prices and the resurgence of the long-term growth narrative linked to artificial intelligence also contributed to the positive sentiment. On the other hand, the war between Israel and Iran and strong government communication regarding the reinstatement of tariffs were negative factors. However, the healthcare sector, which accounts for the vast majority of the Fund's investments, has not yet been able to fully recover from the decline following the tariff announcements. Healthcare stocks faced political headwinds under President Donald Trump's administration. For biopharmaceutical and pharmaceutical companies, the Trump administration's efforts to reduce the price of prescription drugs are weighing more heavily than strong first-quarter results or relative resilience to tariffs. Lower prices could lead to narrower margins and, in the longer term, reduce incentives for drug development, even if the details of the policy measures are not yet clear. The sector's performance is further dampened by the poor performance of UnitedHealth, which suffered a nearly 40% decline in its share price in the last quarter, making it the single stock with the largest negative impact on the overall market this year. As a result of the decline, the healthcare sector is now considered particularly cheap compared to its historical average, with double-digit earnings growth still expected.
