

INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY

The so called "Independence Day" on April 2nd was the biggest event of the month, when Donald Trump announced the long-awaited trade tariffs. The level of the tariffs was higher than the pessimistic scenarios, leading to a significant market sell off. Post-announcement tensions were eased by news of tariffs being postponed and negotiating initiatives by various countries, but the market remained depressed. Amid growing fears of a recession in the US economy, equity markets continued to show high volatility, with bond markets seeing the 10-year US Treasury yield rise to 4.6%. Recent quarterly reports, such as weak performances from UnitedHealth Group and Pepsi, warn that defensive sectors may also be struggling. Conversely, companies that get some sort of exemption from tariffs, such as Apple, may be able to outperform. As markets fall, several European investment institutions see the prospect of a recession as growing. Bond markets are expected to follow US trends and yields could rise on inflationary pressures. The defense and infrastructure sectors may continue to be more attractive as European economic stimulus measures could further boost the performance of these sectors.

In April, the Alfa fund delivered a positive return following the market uncertainty at the beginning of the month. The market turbulence caused by the tariffs announced by the US President allowed us to invest in risky assets such as German, Polish and Hungarian equities at low levels. Towards the end of the month, we took steps to mitigate risk in the event of a significant market bounce. Throughout the month, the fund maintained an above-average equity weight, which subsequently fell below average by the end of the month. We are adopting a more optimistic stance on bonds at present, given the anticipated economic slowdown. Our position on the forint is neutral at EURHUF above 400.
