VIG BondMaxx Total Return Bond Investment Fund

PI series PLN MONTHLY report - 2025 MAY (made on: 05/31/2025)

INVESTMENT POLICY OF THE FUND

The Fund is a total return investment fund that aims to create a portfolio consisting of bond-type assets through active portfolio management that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon. It intends to achieve this objective primarily through asset allocation in global bond markets.
The Fund invests exclusively in bond-type instruments. The Fund's investment universe focuses on developed market government bonds, developed market corporate bonds, local currency emerging market government bonds and hard currency emerging market government and corporate bonds. The primary source of return for the Fund is asset allocation across bond-type asset classes. The asset allocation is based on an “investment clock” approach that uses economic data analysis to determine the position of major regions within a growth cycle. This is complemented by the forecasting of expected movements in real interest rates and inflation expectations, which are also crucial for the allocation across bond markets. Portfolio managers use all these as the basis for making allocation decisions, overweighting the best performing bond asset class in any current economic cycle based on experience and expectations. In the investment process, portfolio managers optimise the interest rate and credit risk of the overall fund and of the exposures to individual bond markets in order to achieve the investment objective.

MARKET SUMMARY

Recent high-frequency data has shown encouraging signs, including indicators such as global shipping activity, corporate guidance and earnings revisions in the United States, and select macroeconomic releases. While considerable uncertainty remains regarding the implications of the recent tariff suspensions, two important dynamics are evident: 1/ These pauses offer markets a temporary period of relief, during which investors may be more inclined to discount weaker hard data; and 2/ Market participants have increasingly come to understand that, despite the initially uncompromising stance of the U.S. administration, a de facto policy backstop exists.
For example, just last week, markets absorbed a series of adverse developments—including the downgrade of U.S. sovereign debt, the imposition of additional EU/U.S. tariffs, and heightened concerns over U.S. fiscal sustainability—yet risk assets have already demonstrated notable resilience. The fund maintains its exposure to Ukraine, awaiting progress in the Ukraine-Russia conflict. Last month, we adopted a positive view on core rates, leading to an increase in the fund’s overall duration. We added U.S. TIPS as well as Italian, UK, and Polish government bonds, and also increased exposure to Romania, supported by improved news flow and compelling valuations. We remain open to maintaining or reducing current exposure to core rates and/or emerging market credit, depending on future developments.
