

INVESTMENT POLICY OF THE FUND

The Fund's objective is to establish a portfolio for its Investors that generates positive returns – higher than the yields available on the domestic money market – under all circumstances, i.e. the Fund pursues a "total return" strategy. The Fund seeks to achieve this goal by selecting, through various analytical techniques, the asset classes and investment funds that have the greatest price growth potential and make investments through the purchase of investment units and collective investment securities. The Fund invests primarily in investment funds managed by VIG Befektetési Alapkezelő Magyarország Zrt., but may also purchase other investment funds and collective investment securities in its portfolio for diversification purposes or if the given asset class is not yet covered by the Fund Manager's funds. In order to ensure liquidity, the Fund may hold in its portfolio discount treasury bills and government bonds issued by the Government Debt Management Agency (ÁKK), interest-bearing securities guaranteed by the Hungarian State, and bonds issued by the MNB. As the range of possible investments includes investments denominated in foreign currency, ETFs and investment units, the Fund's investors may also bear some foreign exchange risk. According to the Fund's investment policy, it invests or may invest more than 80 percent of its assets in investment units or other securities issued by a collective investment undertaking. However, the Fund does not intend to hold more than 20% weight in any one investment fund, except for the VIG Hungarian Money Market Fund, VIG Hungarian Bond Fund, VIGMoneyMaxx Emerging Market Total Return Fund, VIG Alfa Absolute Investment Fund, VIG Bondmaxx Total Return Bond Fund, VIG Maraton ESG Multi Asset Fund, VIG Panoráma Total Return Fund and VIG Ózon Annual Capital Protected Fund, the weight of which may be as much as 100% within the Fund's portfolio.

MARKET SUMMARY

Several factors supported the rise of the US stock market in July: the weakening of the dollar, algorithmic position building due to declining realized volatility, and the continued strong growth narrative in the technology sector, particularly among AI and semiconductor companies. The economic slowdown – for example, weak consumer spending and labor market data, as well as low private sector growth estimates by ADP Research, the global leader in employment performance measurement – did not cause panic.

The passage of the budget bill known as the "Big Beautiful Bill" provided a significant fiscal stimulus, which supported the stock market in the short term but raised concerns among bond market investors about the already controversial sustainability of public debt in the longer term. The yield on the 10-year US government bonds rose, along with the rest of the yield curve, reflecting uncertainty about the solvency of the government.

European markets showed similarly mixed performance. Favorable developments in trade negotiations supported stock indices, but bond markets saw a significant sell-off, mainly due to expectations of a slowdown in interest rate cuts by the European Central Bank. Inflation rose slightly but remains around the 2% target. The ECB's communication remained cautious, but Vice-President De Guindos warned of the dangers of the EUR/USD rate reaching 1.20, which somewhat halted the euro's appreciation.

The Fund's value rose by nearly one percent in July. The rebound in stock markets that began in early April after "Liberation Day" continued in July. This was supported by positive news on tariffs (Japan and the European Union also reached agreements with the Trump administration during the month), declining volatility, and positive corporate reports. At the same time, geopolitical conflicts and deteriorating macroeconomic data call for caution when it comes to riskier investments. President Trump took an increasingly tough stance against Russia in order to force the Russian side into meaningful negotiations, but by the end of the month, this had not yielded any tangible results. The performance of our absolute return funds was thus improved most significantly by our equity investments and short bond exposures.
