VIG BondMaxx Total Return Bond Investment Fund

I series HUF MONTHLY report - 2025 AUGUST (made on: 08/31/2025)

INVESTMENT POLICY OF THE FUND

The Fund is a total return investment fund that aims to create a portfolio consisting of bond-type assets through active portfolio management that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon. It intends to achieve this objective primarily through asset allocation in global bond markets.
The Fund invests exclusively in bond-type instruments. The Fund's investment universe focuses on developed market government bonds, developed market corporate bonds, local currency emerging market government bonds and hard currency emerging market government and corporate bonds. The primary source of return for the Fund is asset allocation across bond-type asset classes. The asset allocation is based on an “investment clock” approach that uses economic data analysis to determine the position of major regions within a growth cycle. This is complemented by the forecasting of expected movements in real interest rates and inflation expectations, which are also crucial for the allocation across bond markets. Portfolio managers use all these as the basis for making allocation decisions, overweighting the best performing bond asset class in any current economic cycle based on experience and expectations. In the investment process, portfolio managers optimise the interest rate and credit risk of the overall fund and of the exposures to individual bond markets in order to achieve the investment objective.

MARKET SUMMARY

The US has reached several bilateral agreements, bringing greater clarity to trade policy. However, the introduction of higher tariff rates is expected to weigh on both global trade and the US economy in the coming months. While global data remains relatively resilient, cracks are beginning to appear in the US labour market. Analysts continue to project 25bp rate cuts by the Fed in September, December, and next March. In the Eurozone, growth prospects for 2025 have strengthened, while GDP forecasts for China have been revised upward. In emerging markets, opportunities persist in local currency debt, though investor preference remains tilted toward equities. Risk assets have been firmly supported in recent weeks—particularly after the latest soft US labor report—on expectations of Fed easing. The most recent CPI release eased fears of inflation delaying a rate cut, sparking a broadly positive reaction across risk assets. Equity markets are reaching new historical highs, while credit remains tight. The current softening in macro data is expected to be contained in both scale and duration, with Fed support likely ensuring that any slowdown proves temporary. Meanwhile, factors such as tariff impacts, increased hedging activity, German fiscal stimulus, and questions around Fed independence continue to shape EUR/USD dynamics. Market participants generally view current valuations as aligned with relative monetary policy expectations—namely, the easing already priced in for the Fed and the ECB through the end of next year relative to their existing policy rates. We recently took profit on our position in Ukraine, which had been significantly increased earlier on optimism surrounding potential peace negotiations. We continue to monitor developments in the Ukraine– Russia conflict closely and stand ready to re-enter the position should conditions improve. Elsewhere, we initiated exposure to Hungarian local bonds and added to longer-dated French government bonds, reinforcing both portfolio duration and overall quality. We remain tactically flexible in managing allocations across core rates and emerging-market credit, maintaining the ability to adjust exposures swiftly in response to evolving market conditions and geopolitical developments.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% ZMAX Index + 0.5%
