

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to invest on the stock market of the Central and Eastern European Region. It is for investors who would like a share in the long-term performance of listed companies in the region. In the development of the portfolio of this Fund, the priority is to optimise the aggregate risk of the securities added to the Fund. In order to reduce risks, the Fund Manager exercises the highest degree of diligence when selecting the securities to be included in the portfolio. It analyses the risk factors of the securities, and supports its decisions with in-depth calculations.

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia, Slovakia), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency. The Fund Manager has the discretionary right to reduce the foreign currency risk of the currency positions differing from the Fund's target currency, based on the market processes by concluding hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. To ensure liquidity, the Fund wishes to add government securities issued by member states of the EU, OECD, or G20 to its portfolio.

MARKET SUMMARY

In September, the prospect of a soft landing for the U.S. economy emerged once again. Poor labor market and retail data confirmed market expectations of interest rate cuts. Meanwhile, disinflation data allowed the Fed to restart the cycle of interest rate cuts without causing panic. The inflationary impact of Trump's tariffs has yet to materialize, allowing the Fed to "overlook" this risk. Slowing growth, easing inflationary pressures, and looser monetary policy created a favorable environment for a stock market rally and a rotation into previously lagging sectors as the year ended. However, the mood was not so rosy in European markets. Weak macroeconomic indicators discouraged risk-taking. Political uncertainty further exacerbated the situation, with the threat of a government crisis in France, for example, increasing volatility. Some positive news came from the reduction in U.S. car tariffs, which improved the outlook for German exports. Inflation stabilized at around 2%, prompting the ECB to leave its key interest rates unchanged. The market does not anticipate further easing. This strengthened the euro in early September, which is bad news for European companies that produce for export markets. The key question for October is whether inflation will continue to moderate. This could stabilize bond markets and provide support for equities, although weak growth could hinder progress.

The Central European stock market closed September at roughly the same level as at the end of August. This time, the Hungarian market was the weakest, with all major stocks falling during the month. The Polish market also underperformed, with the banking sector continuing to weigh it down, while commodity-related sectors managed to rise. The Romanian, Slovenian, and Croatian markets, on the other hand, performed exceptionally well during the month, with the oil and communications sectors driving the markets upward in Romania and the banking and pharmaceutical sectors doing so in Slovenia. We significantly reduced the Fund's equity weighting during the correction in August, so that the equity weighting hovered around 100% in September. The Fund underperformed slightly during the month, mainly due to the poor performance of strategic positions and the underweighting of the raw materials sector. Although we remain cautious in the short term, we saw good buying levels in a few stocks towards the end of the month, so the Fund's equity weighting may rise again in the coming period.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% CETOP 5/10/40 Index
