

INVESTMENT POLICY OF THE FUND

The primary objective of the Fund is sustainable investment, specifically to have a positive environmental impact. It seeks to go beyond mitigating environmental harm and aims to act as a catalyst for environmental change. While the Fund's primary environmental goal is climate change mitigation, it may also contribute to its sustainability objective through other environmental or social targets. Alongside sustainable investment, the Fund also targets capital growth. It primarily, though not exclusively, aims to achieve its goals through investments in equities and equity ETFs. To support its objective, the Fund may also invest in other transferable and equity-linked securities. The Fund Manager integrates sustainability risks and their management into the Fund's investment decision-making process. The Fund's goal is sustainable investment, and it thus falls under Article 9 of the SFDR regulation. The Fund does not apply geographical or sector-specific restrictions, allowing it to invest globally, including in emerging markets. It intends to reach its objectives mainly with equity-type assets, primarily but not exclusively through publicly traded shares, ETFs, and open-ended, public investment funds. The Fund's goal is sustainable investment, which it seeks to achieve mainly through a positive impact on environmental factors within the ESG universe. To this end, it plans to invest primarily in companies with a low ecological footprint, which contribute through their activities to solving global environmental issues—such as transitioning to a lower-carbon economy or adopting a circular economic model. The Fund invests mainly, though not exclusively, in companies significantly involved in energy efficiency, renewable and clean energy, pollution control, water supply and technology, waste management and recycling, sustainable agriculture and forestry, and the sharing economy. The Fund does not have a geographical focus, as environmental interests extend beyond normal economic cycles, encompassing generally global, long-term processes that affect the entire world. Since the Fund aims to benefit from long-term growth and has equity market exposure, it is recommended for investors (1) who seek to invest in securities without geographical limitations and are backed by companies that focus on environmental factors in their activities, (2) whose primary goal is sustainable investment, and (3) who have a high risk tolerance and are willing to accept significant fluctuations in the value of their investments. The asset manager has discretionary authority to decide, based on market conditions, whether to reduce currency risk in positions denominated in currencies other than the target currency by entering into hedging transactions. For efficient portfolio management, the exposure from derivative transactions may not exceed 30% of the Fund's net asset value.

MARKET SUMMARY

During September, the scenario of a soft landing for the US economy came to the forefront once again. Worse-than-expected labor market and retail data confirmed market expectations of interest rate cuts, while disinflation data gave the Fed the green light to restart the cycle of interest rate cuts without causing any particular panic. The inflationary impact of Trump's tariffs has not yet materialized, so the Fed was able to "look through" this risk. Slowing growth, easing inflationary pressures, and looser monetary policy have created a favorable environment for the stock market rally to spread. The Fund's share price continued to rise in September. The renewable energy sector has experienced a serious downturn in recent years following the wave of overvaluation in 2021, which was further exacerbated this summer by the Trump administration's new tax and spending package (OBBA). On the positive side, however, the tax credits available to manufacturers remained virtually untouched, and the 2032 deadline for energy storage investments still applies. In addition, the final law was milder than expected, removing an important regulatory uncertainty that had previously deterred many investors. Another favorable development is that, following the prolonged decline in prices, the valuations of companies in the renewable energy sector are now much more attractive. We continue to view the advance of renewables as a key sub-megatrend. Demand for renewable energy is likely to remain strong in the coming years: according to data from the International Energy Agency (IEA), renewable sources, mainly solar energy, accounted for more than 70% of global electricity generation growth last year. Based on the IEA's forecast, renewable capacity could nearly triple by 2030 compared to 2022 levels. In light of this, we increased the weight of renewable energy stocks in the Fund in September.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Fund has no benchmark
