

INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains - up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY

In October, US capital markets continued to ride the AI wave, while the Fed's expected final interest rate cut this year and the end of quantitative tightening pumped further liquidity into the system. In addition to the dominance of the technology sector, the minor trade truce reached at the Trump-Xi meeting—a reduction in tariffs from 57% to 47% and a one-year easing of rare earth exports—came as a positive surprise, strengthening the dollar and growth prospects. At the same time, the threat of a government shutdown, record data center investments, and Fed Chairman Jerome Powell's caution regarding the December cut dampened the performance of traditional sectors. Bond yields moderated only slightly at longer maturities, while the short end saw a noticeable repricing of the interest rate curve. Europe remained in the grip of political and economic uncertainty: the initial optimism surrounding the formation of the French government proved short-lived, with banking sector stocks falling particularly sharply. Inflation rose slightly in September, but the ECB's decision to keep its key interest rate unchanged raised hopes of easing. Positive signs include a surge in car sales (especially hybrids imported from China) and stable unemployment. On the other hand, weak German industrial production and high energy prices linked to sanctions against Russia continue to put pressure on the continent's economy.

The Alfa Fund achieved positive a return in November, with gains derived from Hungarian long bonds, Romanian euro bonds, direct real estate investments, our long position in gold, and in our equity portfolio. During this period, a favorable capital market environment developed, driven by the Federal Reserve's interest rate reduction and increased capex in artificial intelligence, which further boosted risk appetite. In the CEE stock market correction, we took the opportunity to acquire shares in OTP, Pekao Bank and CCC, as well as the WIG20 Polish stock index, with a view to increasing the fund's equity weighting. We anticipate favorable price movements in the near future, though a negative correction remains a possibility.
