

VIG Developed Market Short Term Bond Investment Fund

EI series EUR MONTHLY report - 2025 OCTOBER (made on: 10/31/2025)

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to increase the euro savings held in the Fund, while assuming low interest-rate and credit risk. The Fund mainly buys short-term, euro-denominated bonds of investment-grade issuers, and aims to generate a return for investors through interest income and price gains on them.

The Fund Manager invests the savings held in the Fund in short-term bonds denominated in euros. The Fund Manager assumes a low interest-rate risk; the modified duration of the portfolio is more than 6 months, but may not be higher than 2.5 years. The Fund also follows a cautious strategy in terms of assuming credit risk, investing a maximum of just 10% of its assets in bonds of non-investment grade or non-credit rated issuers. The Fund primarily invests in developed-market government securities, but this can also be supplemented by credit-institution, corporate and/or municipal bonds, as well as by term deposits and repo transactions. The Fund can also invest a small part of its portfolio in emerging markets. In addition, the Fund may invest in collective investment forms, and can fine-tune the design of its portfolio through the use of derivatives (stock-exchange and OTC transactions). The Fund invests exclusively in securities denominated in euros, and may hold currency assets in bank deposits or bank accounts only for the purpose of liquidity management and currency hedging. It is not possible to make individual investor decisions in the Fund.

No individual investor's decisions can be made in the Fund.

MARKET SUMMARY

In October, US capital markets continued to ride the AI wave, while the Fed's expected final interest rate cut this year and the end of quantitative tightening pumped further liquidity into the system. In addition to the dominance of the technology sector, the minor trade truce reached at the Trump-Xi meeting—a reduction in tariffs from 57% to 47% and a one-year easing of rare earth exports—came as a positive surprise, strengthening the dollar and growth prospects. At the same time, the threat of a government shutdown, record data center investments, and Fed Chairman Jerome Powell's caution regarding the December cut dampened the performance of traditional sectors. Bond yields moderated only slightly at longer maturities, while the short end saw a noticeable repricing of the interest rate curve. Europe remained in the grip of political and economic uncertainty: the initial optimism surrounding the formation of the French government proved short-lived, with banking sector stocks falling particularly sharply. Inflation rose slightly in September, but the ECB's decision to keep its key interest rate unchanged raised hopes of easing. Positive signs include a surge in car sales (especially hybrids imported from China) and stable unemployment. On the other hand, weak German industrial production and high prices linked to sanctions against Russia continue to put pressure on the continent's economy.

The Fed's October rate cut only led to a decline in the yields of the shortest-maturity U.S. bonds. Jerome Powell emphasized that the rate cut expected for December is not guaranteed. Following Powell's comments, yields on longer-term bonds moved higher. At the same time, the ECB decided to hold interest rates steady, even as headline inflation remains above the 2% target. Euro area yields did not show significant movement over the past month, and the market does not currently expect further rate cuts from the ECB, despite weak growth prospects. In terms of composition, the Fund continues to overweight its benchmark index, with a focus on French, Italian, and supranational markets.
