

INVESTMENT POLICY OF THE FUND

The primary objective of the Fund is sustainable investment, specifically to have a positive environmental impact. It seeks to go beyond mitigating environmental harm and aims to act as a catalyst for environmental change. While the Fund's primary environmental goal is climate change mitigation, it may also contribute to its sustainability objective through other environmental or social targets. Alongside sustainable investment, the Fund also targets capital growth. It primarily, though not exclusively, aims to achieve its goals through investments in equities and equity ETFs. To support its objective, the Fund may also invest in other transferable and equity-linked securities. The Fund Manager integrates sustainability risks and their management into the Fund's investment decision-making process. The Fund's goal is sustainable investment, and it thus falls under Article 9 of the SFDR regulation. The Fund does not apply geographical or sector-specific restrictions, allowing it to invest globally, including in emerging markets. It intends to reach its objectives mainly with equity-type assets, primarily but not exclusively through publicly traded shares, ETFs, and open-ended, public investment funds. The Fund's goal is sustainable investment, which it seeks to achieve mainly through a positive impact on environmental factors within the ESG universe. To this end, it plans to invest primarily in companies with a low ecological footprint, which contribute through their activities to solving global environmental issues—such as transitioning to a lower-carbon economy or adopting a circular economic model. The Fund invests mainly, though not exclusively, in companies significantly involved in energy efficiency, renewable and clean energy, pollution control, water supply and technology, waste management and recycling, sustainable agriculture and forestry, and the sharing economy. The Fund does not have a geographical focus, as environmental interests extend beyond normal economic cycles, encompassing generally global, long-term processes that affect the entire world. Since the Fund aims to benefit from long-term growth and has equity market exposure, it is recommended for investors (1) who seek to invest in securities without geographical limitations and are backed by companies that focus on environmental factors in their activities, (2) whose primary goal is sustainable investment, and (3) who have a high risk tolerance and are willing to accept significant fluctuations in the value of their investments. The asset manager has discretionary authority to decide, based on market conditions, whether to reduce currency risk in positions denominated in currencies other than the target currency by entering into hedging transactions. For efficient portfolio management, the exposure from derivative transactions may not exceed 30% of the Fund's net asset value.

MARKET SUMMARY

In October, US capital markets continued to ride the AI wave, while the Fed's expected final interest rate cut this year and the end of quantitative tightening pumped further liquidity into the system. In addition to the dominance of the technology sector, the minor trade truce reached at the Trump-Xi meeting—a reduction in tariffs from 57% to 47% and a one-year easing of rare earth exports—came as a positive surprise, strengthening the dollar and growth prospects. At the same time, the threat of a government shutdown, record data center investments, and Fed Chairman Jerome Powell's caution regarding the December cut dampened the performance of traditional sectors. Bond yields moderated only slightly at longer maturities, while the short end saw a noticeable repricing of the interest rate curve. Europe remained in the grip of political and economic uncertainty: the initial optimism surrounding the formation of the French government proved short-lived, with banking sector stocks falling particularly sharply. Inflation rose slightly in September, but the ECB's decision to keep its key interest rate unchanged raised hopes of easing. Positive signs include a surge in car sales (especially hybrids imported from China) and stable unemployment. On the other hand, weak German industrial production and high energy prices linked to sanctions against Russia continue to put pressure on the continent's economy.

The Fund's price continued to rise, with our exposure to the renewable energy sector performing particularly well. This theme is also driven by the energy needs of data centers. The rise of AI and the proliferation of computer data centers represent not only a technological revolution, but also an energy turning point. The explosive growth in artificial intelligence and cloud computing is increasing global electricity consumption at an unprecedented rate, bringing solar and wind power plants, energy storage, and grid flexibility issues into ever greater focus. In October, we further increased the Fund's exposure to solar energy.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
