

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

In November, global stock markets continued to enjoy favorable sentiment, supported by better-than-expected third-quarter corporate earnings. International investors focused their attention on Nvidia's quaterly report, which further reinforced growth expectations related to artificial intelligence. The difference between emerging and developed markets was striking: developed markets achieved a return of only 0.31% in dollar terms during the month, while Central European stock exchanges, including the Hungarian market, significantly outperformed them. The weakening of the dollar further reinforced this relative advantage. On the domestic market, Hungarian blue chips reported strong, stable fundamentals overall, contributing to the favorable performance of the BUX. The index rose by 1.99% in forints and 4.43% in dollars, outperforming the CETOP Central European index again in November. The best performing stocks of the month were 4iG, OTP, and Graphisoft Park, while Gránit Bank, Richter, and ALTEO were among the weaker performers. Overall, November was a stable and fundamentally positive month for the domestic stock market, supported by a favorable international environment, a weakening dollar, and increased investor activity.
