

INVESTMENT POLICY OF THE FUND

The purpose of the investment fund is to create an equity fund that seeks to benefit from innovation in various industries. The Fund aims to achieve long-term capital growth by investing in global companies that are at the forefront of the use of disruptive technologies and can thus play a leading role in their industries. Disruptive technology refers to innovations or developments that significantly change or disrupt existing industries, business models, products or services. Such trends include, for example, big data (artificial intelligence, cyber security, quantum computers), e-mobility (electric cars and related battery technologies), digitisation and related entertainment (metaverse, e-sports) and, last but not least, fintech and robotics industry breakthroughs.

The Fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. The Fund takes a forward-looking approach and actively seeks companies in industries that show potential for growth through technological innovation. Investments are made in companies that have strong fundamentals and are capable of long-term value creation and achieving competitive advantage through innovation. The investment philosophy is based on the belief that innovation is a key driver of long-term business success and shareholder value. Trends related to technological innovation are long-term processes that extend beyond normal economic cycles and are generally global and affect the entire world. Consequently, the Fund is not subject to any geographical restrictions. Since the Fund aims to profit from long-term growth and has significant exposure to the equity market, we recommend the Fund to investors who want to invest in the longer term and have a relatively high willingness to take risk.

MARKET SUMMARY

This year developed market equities showed stable growth, but in November, the Fund's price could not rise further due to a correction/profit-taking, and the further strengthening of the Hungarian currency further eroded the forint yield. In the US, the Fed's 25 basis point cut in October and the end of quantitative tightening (QT) in December were supportive in principle. However, Fed Chairman Jerome Powell has repeatedly indicated that the next interest rate cut is "far from decided," which has led to a temporary strengthening of the dollar, rising yields, and a stock market correction. In the second half of the month, deteriorating labor market indicators (a weaker ADP employment report, the Beige Book on the economic situation, and slowing consumption among lower-income households) once again increased the likelihood of a December rate cut, although monetary policy expectations have not been this volatile in a long time. Artificial intelligence is still the focus of the market. However, a negative factor is that companies are increasingly financing AI infrastructure investments with credit, increasing private credit risks and uncertainty about future returns. This has caused a temporary rotation among some players. For now, investors are not questioning the rise of AI and the sector as a whole, but are trying to figure out who will profit most from it. Last month, Alphabet and Broadcom emerged as the winners of this rotation within the artificial intelligence megatrend. In November, Google released Gemini 3 Pro, which has significantly improved performance: it has taken the lead in benchmarks, including scientific, logical, multimodal, and coding tests, outperforming its competitors in many areas this month. In addition, Google began selling/deploying its TPUs (previously intended largely for internal use) to other large companies in November 2025. This may indicate that Google wants to be not only an AI software company but also an AI infrastructure company, thus becoming a direct challenger to Nvidia, which has been dominant until now. Apple also reached new heights last month, thanks to the successful launch of the iPhone 17 and strong sales figures. In 2025, global EPS growth was just over 10%, driven disproportionately by US mega-cap technology companies, whose profits grew by 18%. Without this group, EPS growth in the rest of the market would have been only 7-8%. Next year, the potential positive fiscal stimulus could broaden earnings growth beyond technology companies and lead to more even profit growth across sectors and regions, so we are actively adjusting the Fund's allocation.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Fund has no benchmark
ISIN code:	HU0000732953
Start:	03/11/2024
Currency:	EUR
Net Asset Value of the whole Fund:	29,766,159 USD
