

INVESTMENT POLICY OF THE FUND

The purpose of the investment fund is to create an equity fund that can profit from long-term demographic changes and the related changes in consumer habits. The Fund aims to achieve long-term capital growth by investing in global companies that can benefit from the growth and aging of the population, the social and economic changes associated with a healthy lifestyle, urbanisation, the expansion of the emerging markets' middle class and the global economic trends stemming from these social changes, as well as the changing consumption habits driven by such demographic changes.

The Fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. The Fund takes a forward-looking approach and actively seeks companies in industries that can benefit from the long-term global demographic changes and related changes in consumer habits. Investments are made in companies that have strong fundamentals and are well positioned for long-term value creation and competitive advantage due to demographic and social changes. Trends related to demographic and social changes are long-term processes that go beyond normal economic cycles and are generally global and affect the entire world. Consequently, the Fund is not subject to any geographical restrictions. Since the Fund aims to profit from long-term growth and has significant exposure to the equity market, we recommend the Fund to investors who want to invest in the longer term and have a relatively high willingness to take risk.

MARKET SUMMARY

The Fund's price continued to rise in November thanks to sector rotation in the stock market. Over the past month, healthcare stocks, which account for more than 40% of the Fund, have significantly outperformed other industries. Many investors began to exit technology/AI stocks, which raised concerns (e.g., overvaluation, uncertain outlook). This shifted capital toward more "defensive," stable industries, including the healthcare sector. In the US, the Fed's 25 basis point cut in October and the end of quantitative tightening (QT) in December were supportive in principle. However, Fed Chairman Jerome Powell has repeatedly indicated that the next interest rate cut is "far from decided," which has led to a temporary strengthening of the dollar, rising yields, and a stock market correction. In the second half of the month, deteriorating labor market indicators (a weaker ADP employment report, the Beige Book on the economic situation, and slowing consumption among lower-income households) once again increased the likelihood of a December rate cut, although monetary policy expectations have not been this volatile in a long time. Artificial intelligence is still the focus of the market. However, a negative factor is that companies are increasingly financing AI infrastructure investments with credit, increasing private credit risks and uncertainty about future returns. This has caused a temporary rotation from the high-growth/tech segment to more defensive and value-based stocks. In recent years, healthcare stocks (especially biotechnology and pharmaceuticals) have lagged, so many companies now offer relatively favorable entry points and price-to-earnings ratios (P/E, future prospects), which has attracted investor interest. In terms of individual stocks, Eli Lilly contributed most to the performance, becoming the first pharmaceutical company to reach a market capitalization of \$1 trillion.
