VIG BondMaxx Total Return Bond Investment Fund

A series HUF MONTHLY report - 2025 DECEMBER (made on: 12/31/2025)

INVESTMENT POLICY OF THE FUND

The Fund is a total return investment fund that aims to create a portfolio consisting of bond-type assets through active portfolio management that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon. It intends to achieve this objective primarily through asset allocation in global bond markets.
The Fund invests exclusively in bond-type instruments. The Fund's investment universe focuses on developed market government bonds, developed market corporate bonds, local currency emerging market government bonds and hard currency emerging market government and corporate bonds. The primary source of return for the Fund is asset allocation across bond-type asset classes. The asset allocation is based on an "investment clock" approach that uses economic data analysis to determine the position of major regions within a growth cycle. This is complemented by the forecasting of expected movements in real interest rates and inflation expectations, which are also crucial for the allocation across bond markets. Portfolio managers use all these as the basis for making allocation decisions, overweighting the best performing bond asset class in any current economic cycle based on experience and expectations. In the investment process, portfolio managers optimise the interest rate and credit risk of the overall fund and of the exposures to individual bond markets in order to achieve the investment objective.

MARKET SUMMARY

The global economy has remained resilient, with some upside risks, though growth is increasingly driven by AI investment and fiscal spending. US trade policy dominated market attention, with tariff announcements and reversals creating volatility and weighing on sentiment, particularly in the US. While uncertainty distorted soft data and led to trade front-loading, hard economic data held up better than expected, supported by a robust services sector.
A spike in US Treasury volatility in November triggered a temporary sell-off across equities, credit and EM assets, highlighting market sensitivity to rate volatility. However, sustained volatility appears unlikely as the Fed remains patient, economic data has not turned decisively hawkish, and yields remain below levels that typically pressure risk assets.
In fixed income, global yields generally rose in 2025, with notable divergences. US Treasury yields fell in Q1 on growth concerns, rose sharply in Q2 amid trade uncertainty and a US rating downgrade, then declined in Q3 as Fed cut expectations grew. By year-end, markets priced in around 56bp of additional Fed cuts by end-2026.
Credit markets saw broad spread tightening, led by high yield—especially in EUR—during a risk-on Q2– Q3. Spreads widened briefly in October on private credit concerns but largely retraced in November as rate-cut expectations returned.
We continue to closely track the Ukraine– Russia conflict alongside other regions offering compelling growth prospects. During the month, we made minor changes into the fund's allocation by adding to the positions in the EM local currency debt. We maintain a tactically flexible approach, actively managing exposures across core rates and EM credit, and preserving the ability to adjust positioning swiftly as market conditions and geopolitical risks evolve.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% ZMAX Index + 0.5%
ISIN code:	HU0000709597
Start:	01/12/2011
Currency:	HUF
Net Asset Value of the whole Fund:	16,547,474,067 HUF
Net Asset Value of A series:	1,824,907,292 HUF
Net Asset Value per unit:	1.764547 HUF
