

INVESTMENT POLICY OF THE FUND

The objective of the investment fund is to make the Polish bond market accessible to the investors, and to function as a relatively stable, medium-risk investment form bringing steady real yields to our Clients on middle term already, without having to tie down their money for a fixed period of time. The Fund mainly invests in Polish government securities issued in zloty, however, the portfolio manager has some room to complement the portfolio with other bond-type investments. Our goal is to achieve the highest yield while taking the lowest risk. To make investment decisions we use the tools of both fundamental and technical analysis, and we take into consideration the investor sentiment on the markets at all times. The portfolio manager seeks out potential investment opportunities based on the macro-economical expectations, the expected yield curve, the return expected on the curve and the market volatility, and selects investments that are considered to be safe and bring relatively high yields in exchange for the risks taken. The Fund strives for complete exchange risk coverage of foreign currency exposure for the target currency.

MARKET SUMMARY

Polish government bonds showed mostly mixed movements in December. Activity was concentrated mainly at the short end of the yield curve, as one-year yields rose by 38 basis points, while the long end of the curve closed the month largely unchanged. At its early-December rate-setting meeting, the Polish central bank cut interest rates again, lowering the policy rate by 25 basis points to 4%. Moving on with the economic data, preliminary figures indicate that the annual inflation rate continued to decline in December. Statistics Poland measured year-on-year inflation at 2.4%, bringing the rate below the central bank's inflation target. Annual growth in food prices continued to slow, and fuel prices also declined further on a year-on-year basis. Industrial production contracted by 1.1% in the eleventh month of the year. Retail sales, although positive, increased by 3.1%, falling short of market expectations and coming in weaker than in October. The short end of the yield curve is significantly below the policy rate. If inflation continues to develop favorably, it cannot be ruled out that the central bank will continue its rate-cutting cycle that began in 2025.
