

INVESTMENT POLICY OF THE FUND

The purpose of the investment fund is to create an equity fund that can profit from long-term demographic changes and the related changes in consumer habits. The Fund aims to achieve long-term capital growth by investing in global companies that can benefit from the growth and aging of the population, the social and economic changes associated with a healthy lifestyle, urbanisation, the expansion of the emerging markets' middle class and the global economic trends stemming from these social changes, as well as the changing consumption habits driven by such demographic changes. The Fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. The Fund takes a forward-looking approach and actively seeks companies in industries that can benefit from the long-term global demographic changes and related changes in consumer habits. Investments are made in companies that have strong fundamentals and are well positioned for long-term value creation and competitive advantage due to demographic and social changes. Trends related to demographic and social changes are long-term processes that go beyond normal economic cycles and are generally global and affect the entire world. Consequently, the Fund is not subject to any geographical restrictions. Since the Fund aims to profit from long-term growth and has significant exposure to the equity market, we recommend the Fund to investors who want to invest in the longer term and have a relatively high willingness to take risk.

MARKET SUMMARY

December was marked by restraint on US stock markets. Lower inflation data in November initially generated widespread buying, but cautious communication from the Fed quickly dampened enthusiasm. Weak economic data did not support an interest rate cut in January. In our opinion, sustained disinflation could lead to easing, but we do not expect this to happen anytime soon. Bond yields remained stable, and core inflation data may confirm the disinflationary trend. The year 2025 showed significant diversity in the structurally growing stock market: technology and innovation megatrends had the best overall returns, followed by environmental megatrends and, last but not least, social and demographic megatrends. Healthcare stocks underperformed globally in 2025 as a whole, but began to make up for lost ground in the fourth quarter. The sector was hit by political concerns (pharmaceutical tariffs and pricing regulations) and cost pressures on insurers, while the emergence of weight-loss drugs fundamentally changed the way the industry operates. However, we believe that most of the bad news has already been priced in. Moreover, the sector's long-term growth drivers remain in place: an aging society and technological, AI-driven, and scientific advances could lead to more innovation. In terms of the Fund's allocation, we currently invest approximately 45% in healthcare stocks, 20% in the consumer staples sector, and the remainder in discretionary goods and financial sector stocks.
