

VIG Active Beta Flexible Allocation Fund

HUF-RP series MONTHLY report - 2026 JANUARY (made on: 01/31/2026)
HUF

INVESTMENT POLICY OF THE FUND

The Fund's objective is to create an investment portfolio that is intended to achieve capital growth through active portfolio management, investing predominantly in US and European companies. Accordingly, the Fund Manager's investment portfolio is composed of developed-market equities, predominantly securities issued by US and European companies and short-term developed-market government bonds. The Fund pursues an active asset allocation policy. If the Fund Manager considers the prevailing capital market conditions to be unfavourable, it may significantly reduce equity exposure in order to protect capital. If capital market conditions appear ideal for taking equity exposure, the Fund Manager may invest the Fund's assets entirely in equities. On average over a full market cycle, the portfolio maintains an equity ratio of approximately 70%.

The Fund's investment universe includes the developed equity, bond and money markets. The Fund intends to hold liquidity related to trading needs in bank deposits or short-term developed-market government securities. As a general rule, of all the equities in the investment universe, the Fund intends to hold those that are considered the most popular among business partners, employees and investors.

The Fund Manager may significantly reduce equity exposure in the event of a break in a rising trend. In this situation, the Fund mainly holds foreign-currency money-market instruments in its portfolio. In the event of a rising market trend and increasing global risk appetite, the Fund will invest in developed-market equities as mentioned above.

The Fund invests at least 80% in assets that are issued and traded outside Hungary.

MARKET SUMMARY

In the United States, low unemployment and milder core inflation data, as well as favorable news from the semiconductor industry, supported risk appetite. Stock markets rose to new highs, but new news about tariffs and new regulatory proposals for banks caused volatility to rise again. The United States' plans for Greenland caused turmoil in transatlantic relations and put pressure on the dollar. Towards the end of the month, markets interpreted President Trump's nomination of Kevin Warsh as Fed chair as a dollar-friendly move, which led to a sudden turnaround in precious metal prices. Energy markets remained volatile due to developments in Iran and Venezuela. Overall, the month was volatile but slightly positive for equities, characterized by a marked rotation between large-cap technology, cyclical, and financial companies. In Europe, increased transatlantic geopolitical tensions and the ongoing war in Ukraine dampened investor sentiment. Volatility rose in response to events in Greenland, but the Fund maintained its core allocation to US and European growth equities.
