

INVESTMENT POLICY OF THE FUND

The purpose of the investment fund is to create an equity fund that seeks to benefit from innovation in various industries. The Fund aims to achieve long-term capital growth by investing in global companies that are at the forefront of the use of disruptive technologies and can thus play a leading role in their industries. Disruptive technology refers to innovations or developments that significantly change or disrupt existing industries, business models, products or services. Such trends include, for example, big data (artificial intelligence, cyber security, quantum computers), e-mobility (electric cars and related battery technologies), digitisation and related entertainment (metaverse, e-sports) and, last but not least, fintech and robotics industry breakthroughs.

The Fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. The Fund takes a forward-looking approach and actively seeks companies in industries that show potential for growth through technological innovation. Investments are made in companies that have strong fundamentals and are capable of long-term value creation and achieving competitive advantage through innovation. The investment philosophy is based on the belief that innovation is a key driver of long-term business success and shareholder value. Trends related to technological innovation are long-term processes that extend beyond normal economic cycles and are generally global and affect the entire world. Consequently, the Fund is not subject to any geographical restrictions. Since the Fund aims to profit from long-term growth and has significant exposure to the equity market, we recommend the Fund to investors who want to invest in the longer term and have a relatively high willingness to take risk.

MARKET SUMMARY

The US markets were characterized by duality in January: while indices rose to new highs, monetary policy and geopolitical risks called for caution. As expected, the Fed did not cut interest rates, and the market is pricing in one or two 25 basis point cuts this year. The flattening of the yield curve reflects the pricing out of expectations for short-term interest rate cuts. Meanwhile, some analysts warn of the inflationary impact of soaring electricity prices due to the surge in energy demand from data centers. The narrative dominating global markets was Donald Trump's aggressive foreign policy. In terms of sectors, energy and commodities had the best returns in January, while IT companies had the weakest start to the year. One of the biggest losers of the rise of AI continues to be the software sector: several major players are already trading at a discount to the S&P 500, while investors are particularly pessimistic about their prospects. Market expectations are that traditional software solutions will be replaced by AI-based systems and AI agents at a much lower cost. Recently, logic and memory chips have been the drivers of AI growth, as data center investments are driving demand for such solutions to unprecedented levels. There are significant differences within the industry: areas related to artificial intelligence that are on a structural growth path clearly stand out, while the analog segment and the PC and smartphone markets are showing only gradual, fluctuating improvement. The fourth quarter reporting season is in full swing, and the Fund's largest investments have also published their figures. Apple's flash report showed strong overall numbers, exceeding analysts' expectations, mainly due to iPhone sales and strong performance in the Chinese market. Meta produced exceptionally strong revenue, significantly exceeding expectations, and the number of active users continued to grow on an annual basis. Although Microsoft's flash report was better than expected overall, with continued growth in its cloud business, it slowed somewhat, and cloud revenue just met analyst expectations. The market was overshadowed by concerns about the return on AI investments, as Microsoft is spending huge amounts on AI infrastructure, and the return on these investments may take longer, which also affected the share price. In 2026, a key question will be how large data center investors respond to the deteriorating cash situation. Intensive investments in artificial intelligence could eat into the free cash flow of large technology providers, making it increasingly difficult to finance both growing capital investments and share buybacks at the same time, and it may even be necessary to choose between the two.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Fund has no benchmark
ISIN code:	HU0000732953
