

INVESTMENT POLICY OF THE FUND

The Fund aims to achieve a higher return than that of short-term bonds by investing in bonds of low volatility and limited-risk profile issued or guaranteed by certain specified states, quasi-sovereign corporations, national banks or supranational institutions. The Fund invests most of its available assets in low-risk instruments, i.e. bonds issued or guaranteed by the Hungarian state or states with a credit rating at least equal to or better than the latter's latest rating (or by their debt management agencies), quasi-sovereign companies, national banks or supranational institutions. The Fund may hold bank deposits, or cash, and enter into repo and reverse repo transactions. The maximum interest rate risk with respect to the Fund as a whole (i.e. its duration) is 3 years, while the weighted average maturity of the individual securities is a maximum of 10 years. For bonds denominated in currencies other than Hungarian forint, the asset manager seeks to fully hedge the foreign exchange risk, and may only deviate from this at the expense of risky assets (i.e. in the case of foreign exchange under/over-hedging). The Fund uses a small portion of its available assets to purchase risky instruments - domestic and foreign equities, equity indexes, higher risk bonds, foreign exchange, commodity market products and collective investment securities on the spot and futures markets. The Fund may enter into both long and short trades. Based on the approach followed when purchasing risky assets, the Fund is an absolute return fund: it selects investment options with the best possible expected return/risk ratio from the options available to it on the domestic and international money and capital markets. There is no possibility for making individual investor decisions in respect of the Fund.

MARKET SUMMARY

In January, the U.S. markets were characterized by duality: while the AI-driven rally in the technology sector pushed indices to new highs, monetary policy and geopolitical risks called for caution. As expected, the Fed did not cut interest rates, and the market is anticipating one or two 25-basis-point cuts this year. The flattening of the yield curve reflects the disappearance of expectations for short-term interest rate cuts. Stock market sentiment is also bolstered by the relative strength of small-cap companies.

Donald Trump's aggressive foreign policy dominates the narrative of global markets. The possible acquisition and strategic armament of Greenland, as well as the tough stance against Mexico and Colombia, are causing uncertainty in international trade. Due to the surge in energy demand from data centers, some analysts are warning of the inflationary impact of rising electricity prices.

The European economic outlook remains subdued. Although German PMI data was weak at the end of the year, the manufacturing index was better than expected in January. Eurozone inflation has reached or approached the 2% target, reducing the need for further monetary tightening and enabling the ECB to continue its cycle of interest rate cuts. However, most markets do not expect rapid movement but rather stability or very cautious easing in 2026.

At the end of January, Donald Trump nominated Kevin Warsh as the next Chair of the Federal Reserve, whose mandate could take effect from May this year. Warsh has previously taken a hawkish stance regarding the central bank's balance sheet, meaning he opposed further bond purchases. Following the news of the nomination, the weakening trend of the U.S. dollar came to a halt, and a significant correction began in riskier assets. After the announcement, the gold and silver positions held by the fund offset the fund's performance by the end of the month.

Regarding portfolio composition, we hold positions in emerging equity markets (India, Poland, South Korea) as well as in developed equity markets (USA), and the fund is also positioned for a further rise in gold prices.
