

VIG Developed Market Short Term Bond Investment Fund

El series EUR MONTHLY report - 2026 FEBRUARY (made on: 02/28/2026)

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to increase the euro savings held in the Fund, while assuming low interest-rate and credit risk. The Fund mainly buys short-term, euro-denominated bonds of investment-grade issuers, and aims to generate a return for investors through interest income and price gains on them. The Fund Manager invests the savings held in the Fund in short-term bonds denominated in euros. The Fund Manager assumes a low interest-rate risk; the modified duration of the portfolio is more than 6 months, but may not be higher than 2.5 years. The Fund also follows a cautious strategy in terms of assuming credit risk, investing a maximum of just 10% of its assets in bonds of non-investment grade or non-credit rated issuers. The Fund primarily invests in developed-market government securities, but this can also be supplemented by credit-institution, corporate and/or municipal bonds, as well as by term deposits and repo transactions. The Fund can also invest a small part of its portfolio in emerging markets. In addition, the Fund may invest in collective investment forms, and can fine-tune the design of its portfolio through the use of derivatives (stock-exchange and OTC transactions). The Fund invests exclusively in securities denominated in euros, and may hold currency assets in bank deposits or bank accounts only for the purpose of liquidity management and currency hedging. It is not possible to make individual investor decisions in the Fund. No individual investor's decisions can be made in the Fund.

MARKET SUMMARY

In February, the S&P 500 index declined slightly, while the VIX (the volatility index) remained at a consistently high level, indicating a strong sector rotation within the index. Nvidia's quarterly revenue exceeded expectations, but the subdued market reaction suggests that the positive surprise was already priced in. In terms of monetary policy, Kevin Warsh's nomination as Fed chair fundamentally rewrote interest rate expectations, shifting market attention from the short-term interest rate path to the possible reduction of the central bank's \$6.6 trillion balance sheet. Futures markets are currently pricing in two cuts for 2026, with the first move expected to be postponed until June-July. The yield curve has stabilized at around 4.1% on 10-year bonds. On the geopolitical front, the resumption of US-Iran nuclear talks, Iran's 15-day ultimatum, and the concentration of forces in the Middle East have pushed up oil prices. European stock markets significantly outperformed the US, fueled by favorable valuations, a strong earnings season, and political commitment to increase defense spending. The ECB is expected to continue its easing cycle, but news of ECB President Lagarde's possible early departure raises some uncertainty about the continuity of institutional communication. Following the weakness observed in January, European yield curves declined by 5– 15 basis points in February. In terms of portfolio composition, we sold the short-dated Dutch government bonds held in the Fund, as they offer only a limited yield spread over German government bonds. Instead, we purchased Romanian and Hungarian euro-denominated government bonds, which provide more attractive yield spreads compared with euro-area sovereign bonds.
