

## INVESTMENT POLICY OF THE FUND

The purpose of the investment fund is to create an equity fund that seeks to benefit from innovation in various industries. The Fund aims to achieve long-term capital growth by investing in global companies that are at the forefront of the use of disruptive technologies and can thus play a leading role in their industries. Disruptive technology refers to innovations or developments that significantly change or disrupt existing industries, business models, products or services. Such trends include, for example, big data (artificial intelligence, cyber security, quantum computers), e-mobility (electric cars and related battery technologies), digitisation and related entertainment (metaverse, e-sports) and, last but not least, fintech and robotics industry breakthroughs.

The Fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. The Fund takes a forward-looking approach and actively seeks companies in industries that show potential for growth through technological innovation. Investments are made in companies that have strong fundamentals and are capable of long-term value creation and achieving competitive advantage through innovation. The investment philosophy is based on the belief that innovation is a key driver of long-term business success and shareholder value. Trends related to technological innovation are long-term processes that extend beyond normal economic cycles and are generally global and affect the entire world. Consequently, the Fund is not subject to any geographical restrictions. Since the Fund aims to profit from long-term growth and has significant exposure to the equity market, we recommend the Fund to investors who want to invest in the longer term and have a relatively high willingness to take risk.

## MARKET SUMMARY

In February, US capital markets were dominated by a strong rotation out of growth stocks, which had a negative impact on the performance of the Fund's focus sectors. The S&P 500 fell by only -0.8%, but the Magnificent Seven lost -7.3%, while the equally weighted index rose by +3.5%. The macroeconomic backdrop deteriorated: fourth-quarter GDP slowed to +1.4%, labor market data was revised down by nearly 900,000, and the strengthening stagflation narrative put pressure on growth stocks. Among the focus sectors, IT (-3.9%), communications services (-5.1%) and consumer discretionary (-5.4%) were the weakest sectors in the S&P 500 in February. The fourth-quarter reporting season once again brought record results for AI-related companies: Nvidia reported quarterly revenue of \$68.1 billion (+73% year-on-year) and provided guidance of \$78 billion for the next quarter, far exceeding market expectations. It is thought-provoking, however, that despite the outstanding results, Nvidia's stock was unable to move sideways after the report and even fell more than 5% the day after the announcement. "Hyperscale" companies (Amazon, Alphabet, Meta, Microsoft) have allocated a total of approximately \$600-650 billion in capital expenditure for AI infrastructure by 2026, which is roughly double the previous year's level. Companies are citing supply constraints as the reason for these increases, which confirms the structural demand in the sector, but investors are increasingly concerned about the timing of returns. Alphabet announced a 100-year bond issue to finance construction, and Bank of America estimates that hyperscalers will spend about 90% of their operating cash flow on capital expenditures in 2026, which could also make share buyback programs unsustainable. Within the technology sector, software companies were the biggest losers. In early February, investors withdrew nearly \$1 trillion in market value from the sector after the emergence of autonomous AI agents, particularly new code-writing and workflow automation tools, fundamentally challenged the traditional software-as-a-service (SaaS) business model. The popular software ETF (IGV) fell 30% from its September 2025 peak, while the semiconductor ETF (SMH) rose 30% over the same period. AI-related companies continue to make up the largest part of the portfolio, with an emphasis on the infrastructure segment. However, the biggest change in position over the past month has been a shift towards the software sector: taking advantage of the extremely negative market sentiment, we increased the weight of software companies in the Fund. After the decline, valuations and the risk/return profile made the sector attractive for selective purchases.

## GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Fund has no benchmark
ISIN code:	HU0000732946
Start:	03/11/2024
Currency:	USD
Net Asset Value of the whole Fund:	26,510,139 USD
Net Asset Value of USD-I series:	40,634 USD
Net Asset Value per unit:	1.326923 USD
