

INVESTMENT POLICY OF THE FUND

The fund aims to profit from global megatrends that extend beyond economic cycles. Such trends may include demographic changes (ageing society, developing markets), efficiency gains due to scarce resources (renewable resources, energy efficiency), urbanisation, or even technological innovation. The fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. Megatrends are long-term changes that have a lasting impact on our social and economic environment. The fund aims to share in the profit growth of companies that could be winners in these processes. Megatrends are long-term processes that extend beyond normal economic cycles, are usually global and affect the whole world. Consequently, the fund does not have a geographical specification. As the fund aims to profit from long-term growth and has significant exposure to stock markets, it is recommended for risk-taking investors with a long-term investment horizon. The Fund holds its assets in euro. The Fund invests only in investments where the expense ratio remains below 2.5%, but always aims to keep the average fees charged on the underlying collective investment instruments below 1%. The fund also does not have a geographical specification, and thus no typical currency composition. The target currency of the Fund is therefore the settlement currency of the benchmark index (USD). Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio.

MARKET SUMMARY

February saw significant rotation in the US stock market: while the S&P 500 index fell by only -0.8%, the Magnificent Seven group of companies lost -7.3%, while the S&P 500 equal-weighted index rose by +3.5%. Investors shifted capital from growth stocks to value and cyclical sectors, supported by deteriorating US macroeconomic data: fourth-quarter GDP slowed to just +1.4%, while the labor market weakened faster than expected. January employment data was revised to +130,000, while the previous year's data was revised down by nearly 900,000. The Fed kept interest rates in the 3.50-3.75% range, and the February FOMC minutes revealed concerns about stubborn inflation. Among sectors, utilities, energy, materials, and consumer staples rose the most, while technology and innovation-exposed segments were held back by broad market rotation.

The most significant market event of the month was the Supreme Court's February 20 ruling, which declared Trump's tariffs unconstitutional by a 6-3 margin. Trump immediately responded by imposing a new 10% global tariff, which he raised to 15% the next day. However, this measure will expire after 150 days, creating uncertainty until July.

Over the past month, we have made several thematic shifts in the Fund. We reduced our exposure to new types of consumption, cybersecurity and fintech, healthcare, and silver mining. At the same time, we increased our positions in the renewable energy, electrification (grid development, uranium), and agribusiness sectors.
