

VIG Active Beta Flexible Allocation Fund

HUF-RP series MONTHLY report - 2026 MARCH (made on: 03/31/2026)
HUF

INVESTMENT POLICY OF THE FUND

The Fund's objective is to create an investment portfolio that is intended to achieve capital growth through active portfolio management, investing predominantly in US and European companies. Accordingly, the Fund Manager's investment portfolio is composed of developed-market equities, predominantly securities issued by US and European companies and short-term developed-market government bonds. The Fund pursues an active asset allocation policy. If the Fund Manager considers the prevailing capital market conditions to be unfavourable, it may significantly reduce equity exposure in order to protect capital. If capital market conditions appear ideal for taking equity exposure, the Fund Manager may invest the Fund's assets entirely in equities. On average over a full market cycle, the portfolio maintains an equity ratio of approximately 70%.

The Fund's investment universe includes the developed equity, bond and money markets. The Fund intends to hold liquidity related to trading needs in bank deposits or short-term developed-market government securities. As a general rule, of all the equities in the investment universe, the Fund intends to hold those that are considered the most popular among business partners, employees and investors.

The Fund Manager may significantly reduce equity exposure in the event of a break in a rising trend. In this situation, the Fund mainly holds foreign-currency money-market instruments in its portfolio. In the event of a rising market trend and increasing global risk appetite, the Fund will invest in developed-market equities as mentioned above.

The Fund invests at least 80% in assets that are issued and traded outside Hungary.

MARKET SUMMARY

The defining event of the month was the outbreak of armed conflict between the U.S. and Iran on February 28, which fundamentally reshaped the global risk landscape. The closure of the Strait of Hormuz—the most important transit route for oil and natural gas in the Middle East—and the mutual strikes against energy infrastructure painted a picture of a stagflationary scenario. The S&P 500 index ended March, down nearly 7%, marking the global stock market's largest monthly decline since 2022. The technology sector led the correction, while energy and defense stocks showed relative strength. The Fed, acting as the central bank, left the benchmark interest rate unchanged; however, the previously priced-in rate cut disappeared, and the 10-year yield rose to near 4.4%. The Euro Stoxx 50, the benchmark for Europe, was also hit by high oil prices, with the index—which tracks the share prices of the largest companies—falling 10%. In line with this, the EU warned that if the price of Brent crude oil, the benchmark for the continent, remains around \$100 per barrel, inflation could rise above 3%, and GDP growth could fall short of the 1.4% forecast by as much as 0.4 percentage points. The European Central Bank has found itself in an extremely difficult position, as the energy price shock is hitting Europe proportionally harder than the U.S., making market pricing regarding interest rate policy divergence unsustainable. Airlines, the auto industry, and the luxury goods sector suffered the most, while energy and defense stocks were positive outliers.

In March, geopolitical events drove stock market movements: the escalation of tensions between Iran and Israel/the U.S. and periodic threats regarding the closure of the Strait of Hormuz pushed crude oil prices from the \$70 level to triple digits, which repeatedly shook the risk appetite. While we saw price increases in the energy and defense sectors, airlines and the more interest-rate-sensitive technology sector came under selling pressure. The rise in long-term yields reflected resurgent inflation risks, while expectations for interest rate cuts were also pushed back. Due to increased volatility, the Fund sold its remaining U.S. equity positions at the beginning of the month and reduced the weight of European growth stocks in the portfolio in several stages throughout the month.
